✓ 5th E31.2 Multiple endocrine neoplasia [MEN] syndromes

Multiple endocrine adenomatosis

Code also any associated malignancies and other conditions associated with the syndromes

DEF: Group of conditions in which several endocrine glands grow excessively (such as in adenomatous hyperplasia) and/or develop benign or malignant tumors. Tumors and hyperplasia associated with MEN often produce excess hormones, which impede normal physiology. There is no comprehensive cure known for MEN syndrome. Treatment is directed at the hyperplasia or tumors in each individual gland. Tumors are usually surgically removed and oral medications or hormonal injections are used to correct hormone imbalances.

Chapter 5. Mental, Behavioral and Neurodevelopmental Disorders (F01–F99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Pain disorders related to psychological factors

Assign code F45.41, for pain that is exclusively related to psychological disorders. As indicated by the Excludes 1 note under category G89, a code from category G89 should not be assigned with code F45.41.

Perceived abdominal pain determined to be persistent somatoform pain disorder

F45.41 Pain disorder exclusively related to psychological factors

Explanation: This pain was diagnosed as being exclusively psychological; therefore, no code from category G89 is added.

Code F45.42, Pain disorders with related psychological factors, should be used with a code from category G89, Pain, not elsewhere classified, if there is documentation of a psychological component for a patient with acute or chronic pain.

See Section I.C.6. Pain

b. Mental and behavioral disorders due to psychoactive substance use

1) In remission

Selection of codes for "in remission" for categories F10–F19, Mental and behavioral disorders due to psychoactive substance use (categories F10–F19 with -11, -21) requires the provider's clinical judgment. The appropriate codes for "in remission" are assigned only on the basis of provider documentation (as defined in the Official Guidelines for Coding and Reporting), unless otherwise instructed by the classification.

Mild substance use disorders in early or sustained remission are classified to the appropriate codes for substance abuse in remission, and moderate or severe substance use disorders in early or sustained remission are classified to the appropriate codes for substance dependence in remission.

Insomnia in patient with history of methamphetamine abuse; lab results indicate no current drug use

G47.00 Insomnia, unspecified

F15.10 Other stimulant abuse, uncomplicated

Explanation: Insomnia is a common side-effect of stimulant use, such as methamphetamines. Although lab tests do not indicate that the patient is currently using methamphetamines, there is no specific documentation stating that the stimulant abuse is in remission. "History of" abuse does not equate to "in remission" in this instance.

2) Psychoactive substance use, abuse and dependence

When the provider documentation refers to use, abuse and dependence of the same substance (e.g. alcohol, opioid, cannabis, etc.), only one code should be assigned to identify the pattern of use based on the following hierarchy:

- If both use and abuse are documented, assign only the code for abuse
- If both abuse and dependence are documented, assign only the code for dependence
- If use, abuse and dependence are all documented, assign only the code for dependence
- If both use and dependence are documented, assign only the code for dependence.

History and physical notes cannabis dependence; progress note says cannabis abuse

F12.20 Cannabis dependence, uncomplicated

Explanation: In the hierarchy, the dependence code is used if both abuse and dependence are documented.

Discharge summary says cocaine abuse; progress notes list cocaine use

F14.10 Cocaine abuse, uncomplicated

Explanation: In the hierarchy, the abuse code is used if both abuse and use are documented.

3) Psychoactive substance use, unspecified

As with all other unspecified diagnoses, the codes for unspecified psychoactive substance use disorders (F10.9-, F11.9-, F12.9-, F13.9-, F14.9-, F15.9-, F16.9-, F18.9-, F19.9-) should only be assigned based on provider documentation and when they meet the definition of a reportable diagnosis (see Section III, Reporting Additional Diagnoses). These codes are to be used only when the psychoactive substance use is associated with a physical **disorder included in chapter 5 (such as sexual dysfunction and sleep disorder)**, or a mental or behavioral disorder, and such a relationship is documented by the provider.

c. Factitious disorder

Factitious disorder imposed on self or Munchausen's syndrome is a disorder in which a person falsely reports or causes his or her own physical or psychological signs or symptoms. For patients with documented factitious disorder on self or Munchausen's syndrome, assign the appropriate code from subcategory F68.1-, Factitious disorder imposed on self.

Munchausen's syndrome by proxy (MSBP) is a disorder in which a caregiver (perpetrator) falsely reports or causes an illness or injury in another person (victim) under his or her care, such as a child, an elderly adult, or a person who has a disability. The condition is also referred to as "factitious disorder imposed on another" or "factitious disorder by proxy." The perpetrator, not the victim, receives this diagnosis. Assign code F68.A, Factitious disorder imposed on another, to the perpetrator's record. For the victim of a patient suffering from MSBP, assign the appropriate code from categories T74, Adult and child abuse, neglect and other maltreatment, confirmed, or T76, Adult and child abuse, neglect and other maltreatment, suspected.

See Section I.C.19.f. Adult and child abuse, neglect and other maltreatment

Chapter 5. Mental, Behavioral and Neurodevelopmental Disorders (F01–F99)

- INCLUDES** disorders of psychological development
- EXCLUDES2** symptoms, signs and abnormal clinical laboratory findings, not elsewhere classified (R00–R99)

This chapter contains the following blocks:

- F01–F09 Mental disorders due to known physiological conditions
- F10–F19 Mental and behavioral disorders due to psychoactive substance use
- F20–F29 Schizophrenia, schizotypal, delusional, and other non-mood psychotic disorders
- F30–F39 Mood [affective] disorders
- F40–F48 Anxiety, dissociative, stress-related, somatoform and other nonpsychotic mental disorders
- F50–F59 Behavioral syndromes associated with physiological disturbances and physical factors
- F60–F69 Disorders of adult personality and behavior
- F70–F79 Intellectual disabilities
- F80–F89 Pervasive and specific developmental disorders
- F90–F98 Behavioral and emotional disorders with onset usually occurring in childhood and adolescence
- F99 Unspecified mental disorder

Mental disorders due to known physiological conditions (F01–F09)

- NOTE** This block comprises a range of mental disorders grouped together on the basis of their having in common a demonstrable etiology in cerebral disease, brain injury, or other insult leading to cerebral dysfunction. The dysfunction may be primary, as in diseases, injuries, and insults that affect the brain directly and selectively; or secondary, as in systemic diseases and disorders that attack the brain only as one of the multiple organs or systems of the body that are involved.

✓4th F01 Vascular dementia

Vascular dementia as a result of infarction of the brain due to vascular disease, including hypertensive cerebrovascular disease.

- INCLUDES** arteriosclerotic dementia

Code first the underlying physiological condition or sequelae of cerebrovascular disease.

✓5th F01.5 Vascular dementia

F01.50 Vascular dementia without behavioral disturbance MCC A

Major neurocognitive disorder without behavioral disturbance

F01.51 Vascular dementia with behavioral disturbance CC MCC A

- Major neurocognitive disorder due to vascular disease, with behavioral disturbance
 - Major neurocognitive disorder with aggressive behavior
 - Major neurocognitive disorder with combative behavior
 - Major neurocognitive disorder with violent behavior
 - Vascular dementia with aggressive behavior
 - Vascular dementia with combative behavior
 - Vascular dementia with violent behavior
- Use additional code, if applicable, to identify wandering in vascular dementia (Z91.83)

✓4th F02 Dementia in other diseases classified elsewhere

- INCLUDES** major neurocognitive disorder in other diseases classified elsewhere

Code first the underlying physiological condition, such as:

- Alzheimer's (G30.-)
- cerebral lipidosis (E75.4)
- Creutzfeldt-Jakob disease (A81.0-)
- dementia with Lewy bodies (G31.83)
- dementia with Parkinsonism (G31.83)

Chapter 6. Diseases of the Nervous System (G00-G99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Dominant/nondominant side

Codes from category G81, Hemiplegia and hemiparesis, and subcategories G83.1, Monoplegia of lower limb, G83.2, Monoplegia of upper limb, and G83.3, Monoplegia, unspecified, identify whether the dominant or nondominant side is affected. Should the affected side be documented, but not specified as dominant or nondominant, and the classification system does not indicate a default, code selection is as follows:

- For ambidextrous patients, the default should be dominant.
- If the left side is affected, the default is non-dominant.
- If the right side is affected, the default is dominant.

Hemiplegia affecting left side of ambidextrous patient

G81.92 Hemiplegia, unspecified affecting left dominant side

Explanation: Documentation states that the left side is affected and dominant is used for ambidextrous persons.

Right spastic hemiplegia, unknown whether patient is right- or left-handed

G81.11 Spastic hemiplegia affecting right dominant side

Explanation: Since it is unknown whether the patient is right- or left-handed, if the right side is affected, the default is dominant.

b. Pain—category G89

1) General coding information

Codes in category G89, Pain, not elsewhere classified, may be used in conjunction with codes from other categories and chapters to provide more detail about acute or chronic pain and neoplasm-related pain, unless otherwise indicated below.

If the pain is not specified as acute or chronic, post-thoracotomy, postprocedural, or neoplasm-related, do not assign codes from category G89.

A code from category G89 should not be assigned if the underlying (definitive) diagnosis is known, unless the reason for the encounter is pain control/ management and not management of the underlying condition. When an admission or encounter is for a procedure aimed at treating the underlying condition (e.g., spinal fusion, kyphoplasty), a code for the underlying condition (e.g., vertebral fracture, spinal stenosis) should be assigned as the principal diagnosis. No code from category G89 should be assigned.

Elderly patient with back pain is admitted for kyphoplasty for age-related osteopathic compression fracture at vertebra T3

M80.08XA Age-related osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture

Explanation: No code is assigned for the pain as it is inherent in the underlying condition being treated.

(a) Category G89 codes as principal or first-listed diagnosis

Category G89 codes are acceptable as principal diagnosis or the first-listed code:

- When pain control or pain management is the reason for the admission/encounter (e.g., a patient with displaced intervertebral disc, nerve impingement and severe back pain presents for injection of steroid into the spinal canal). The underlying cause of the pain should be reported as an additional diagnosis, if known.

- When a patient is admitted for the insertion of a neurostimulator for pain control, assign the appropriate pain code as the principal or first-listed diagnosis. When an admission or encounter is for a procedure aimed at treating the underlying condition and a neurostimulator is inserted for pain control during the same admission/encounter, a code for the underlying condition should be assigned as the principal diagnosis and the appropriate pain code should be assigned as a secondary diagnosis.

Patient with chronic pain from lumbar spondylosis with radiculopathy not relieved by surgery is admitted for insertion of neurostimulator.

G89.29 Other chronic pain

M47.26 Other spondylosis with radiculopathy, lumbar region

Explanation: Since the patient is admitted specifically for a neurostimulator implantation for pain management and not to treat the underlying spondylosis, the chronic pain code is sequenced first, followed by the underlying condition. Neither code M54.16 nor M54.5 is necessary because M47.26 describes the radiculopathy and the site.

(b) Use of category G89 codes in conjunction with site specific pain codes

(i) Assigning category G89 and site-specific pain codes

Codes from category G89 may be used in conjunction with codes that identify the site of pain (including codes from chapter 18) if the category G89 code provides additional information. For example, if the code describes the site of the pain, but does not fully describe whether the pain is acute or chronic, then both codes should be assigned.

During hospital stay, patient is seen by orthopaedics to evaluate chronic left shoulder pain.

M25.512 Pain in left shoulder

G89.29 Other chronic pain

Explanation: No underlying condition has been determined yet so the pain would be the reason for the visit. The M25 pain code in this instance does not fully describe the condition as it does not represent that the pain is chronic. The G89 chronic pain code is assigned to provide specificity.

(ii) Sequencing of category G89 codes with site-specific pain codes

The sequencing of category G89 codes with site-specific pain codes (including chapter 18 codes), is dependent on the circumstances of the encounter/admission as follows:

- If the encounter is for pain control or pain management, assign the code from category G89 followed by the code identifying the specific site of pain (e.g., encounter for pain management for acute neck pain from trauma is assigned code G89.11, Acute pain due to trauma, followed by code M54.2, Cervicalgia, to identify the site of pain).

Management of acute, traumatic right knee pain

G89.11 Acute pain due to trauma

M25.561 Pain in right knee

Explanation: The reason for the encounter is to manage or control the pain, not to treat or evaluate an underlying condition. The G89 pain code is assigned as the principal diagnosis but in this instance does not fully describe the condition as it does not include the site and laterality. The M25 pain code is added to provide this information.

- If the encounter is for any other reason except pain control or pain management, and a related definitive diagnosis has not been established (confirmed) by the provider, assign the code for the specific site of pain first, followed by the appropriate code from category G89.

Tests are performed to investigate the source of the patient's chronic epigastric abdominal pain

R10.13 Epigastric pain

G89.29 Other chronic pain

Explanation: In this instance the patient's epigastric pain is not being treated; rather the source of the pain is being investigated. A code from chapter 18 for epigastric pain is sequenced before the additional specificity of the G89 code for the chronic pain.

2) Pain due to devices, implants and grafts

See Section I.C.19. Pain due to medical devices

3) Postoperative pain

The provider's documentation should be used to guide the coding of postoperative pain, as well as Section III. *Reporting Additional Diagnoses* and Section IV. *Diagnostic Coding and Reporting in the Outpatient Setting*.

The default for post-thoracotomy and other postoperative pain not specified as acute or chronic is the code for the acute form.

Routine or expected postoperative pain immediately after surgery should not be coded.

Pain pump dose is increased for the patient's unexpected, extreme pain post-thoracotomy

G89.12 Acute post-thoracotomy pain

Explanation: When acute or chronic is not documented, default to acute. The use of "unexpected, extreme" and the increase of medication dosage indicate that the pain was more than routine or expected.

(a) Postoperative pain not associated with specific postoperative complication

Postoperative pain not associated with a specific postoperative complication is assigned to the appropriate postoperative pain code in category G89.

(b) Postoperative pain associated with specific postoperative complication

Postoperative pain associated with a specific postoperative complication (such as painful wire sutures) is assigned to the appropriate code(s) found in Chapter 19, Injury, poisoning, and certain other consequences of external causes. If appropriate, use additional code(s) from category G89 to identify acute or chronic pain (G89.18 or G89.28).

4) Chronic pain

Chronic pain is classified to subcategory G89.2. There is no time frame defining when pain becomes chronic pain. The provider's documentation should be used to guide use of these codes.

5) Neoplasm related pain

Code G89.3 is assigned to pain documented as being related, associated or due to cancer, primary or secondary malignancy, or tumor. This code is assigned regardless of whether the pain is acute or chronic.

This code may be assigned as the principal or first-listed code when the stated reason for the admission/encounter is documented as pain control/pain management. The underlying neoplasm should be reported as an additional diagnosis.

Pain medication adjustment for chronic pain from bone metastasis

G89.3 Neoplasm related pain (acute)(chronic)

C79.51 Secondary malignant neoplasm of bone

Explanation: Since the encounter was for pain medication management, the pain, rather than the neoplasm, was the reason for the encounter and is sequenced first. This "neoplasm-related pain" code includes both acute and chronic pain.

When the reason for the admission/encounter is management of the neoplasm and the pain associated with the neoplasm is also documented, code G89.3 may be assigned as an additional diagnosis. It is not necessary to assign an additional code for the site of the pain.

See Section I.C.2 for instructions on the sequencing of neoplasms for all other stated reasons for the admission/encounter (except for pain control/pain management).

Patient with lung cancer presents with acute hip pain and is evaluated and found to have iliac bone metastasis

C79.51 Secondary malignant neoplasm of bone

C34.90 Malignant neoplasm of unspecified part of unspecified bronchus or lung

G89.3 Neoplasm related pain (acute)(chronic)

Explanation: The reason for the encounter was the evaluation and diagnosis of the bone metastasis, whose code would be assigned as first-listed, followed by codes for the primary neoplasm and the pain due to the iliac bone metastasis.

6) Chronic pain syndrome

Central pain syndrome (G89.0) and chronic pain syndrome (G89.4) are different than the term "chronic pain," and therefore codes should only be used when the provider has specifically documented this condition.

See Section I.C.5. Pain disorders related to psychological factors

Chapter 6. Diseases of the Nervous System (G00-G99)

EXCLUDES 2 certain conditions originating in the perinatal period (P04-P96)
 certain infectious and parasitic diseases (A00-B99)
 complications of pregnancy, childbirth and the puerperium (O00-O9A)
 congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)
 endocrine, nutritional and metabolic diseases (E00-E88)
 injury, poisoning and certain other consequences of external causes (S00-T88)
 neoplasms (C00-D49)
 symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)

This chapter contains the following blocks:

G00-G09 Inflammatory diseases of the central nervous system
 G10-G14 Systemic atrophies primarily affecting the central nervous system
 G20-G26 Extrapyramidal and movement disorders
 G30-G32 Other degenerative diseases of the nervous system
 G35-G37 Demyelinating diseases of the central nervous system
 G40-G47 Episodic and paroxysmal disorders
 G50-G59 Nerve, nerve root and plexus disorders
 G60-G65 Polyneuropathies and other disorders of the peripheral nervous system
 G70-G73 Diseases of myoneural junction and muscle
 G80-G83 Cerebral palsy and other paralytic syndromes
 G89-G99 Other disorders of the nervous system

Inflammatory diseases of the central nervous system (G00-G09)**G00 Bacterial meningitis, not elsewhere classified**

[INCLUDES] bacterial arachnoiditis
 bacterial leptomeningitis
 bacterial meningitis
 bacterial pachymeningitis

EXCLUDES 1 bacterial meningoencephalitis (G04.2)
 bacterial meningomyelitis (G04.2)

DEF: Inflammation of meningeal layers of the brain and spinal cord due to a bacterial infection.

G00.0 Hemophilus meningitis

Meningitis due to Hemophilus influenzae

G00.1 Pneumococcal meningitis

Meningitis due to Streptococcal pneumoniae

G00.2 Streptococcal meningitis

 zoster meningitis (B02.1)

G03 Meningitis due to other and unspecified causes

[INCLUDES] arachnoiditis NOS
 leptomeningitis NOS
 meningitis NOS
 pachymeningitis NOS
EXCLUDES 1 meningoencephalitis (G04.-)
 meningomyelitis (G04.-)

G03.0 Nonpyogenic meningitis

Aseptic meningitis
 Nonbacterial meningitis
DEF: Type of meningitis where no bacterial, viral, or other infectious source exists that explains the meningitis symptomatology.

G03.1 Chronic meningitis**G03.2 Benign recurrent meningitis [Mollaret]**

DEF: Aseptic or noninfectious inflammation of the meninges with the presence of Mollaret cells in the spinal fluid. The patient experiences recurrent bouts of inflammation, lasting anywhere from two to five days.

G03.8 Meningitis due to other specified causes**G03.9 Meningitis, unspecified**

Arachnoiditis (spinal) NOS

G04 Encephalitis, myelitis and encephalomyelitis

[INCLUDES] acute ascending myelitis
 meningoencephalitis
 meningomyelitis
EXCLUDES 1 encephalopathy NOS (G93.40)
 acute transverse myelitis (G37.3-)
 alcoholic encephalopathy (G31.2)
 benign myalgic encephalomyelitis (G93.3)
 multiple sclerosis (G35)
 subacute necrotizing myelitis (G37.4)
 toxic encephalitis (G92)
 toxic encephalopathy (G92)

DEF: Encephalitis: Inflammation of the brain, often caused by viral or bacterial infection.

DEF: Encephalomyelitis: Inflammatory disease, often viral in nature, that affects the brain and spinal cord.

DEF: Myelitis: Inflammation of the spinal cord.

G04.0 Acute disseminated encephalitis and encephalomyelitis (ADEM)

EXCLUDES 1 acute necrotizing hemorrhagic encephalopathy (G04.3-)
 other noninfectious acute disseminated encephalomyelitis (noninfectious ADEM) (G04.81)

G04.00 Acute disseminated encephalitis and encephalomyelitis, unspecified**G04.01 Postinfectious acute disseminated encephalitis and encephalomyelitis (postinfectious ADEM)**

EXCLUDES 1 post chickenpox encephalitis (B01.1)
 post measles encephalitis (B05.0)
 post measles myelitis (B05.1)

Septic embolism of intracranial or intraspinal venous sinuses and veins
 Septic endophlebitis of intracranial or intraspinal venous sinuses and veins

Septic phlebitis of intracranial or intraspinal venous sinuses and veins
 Septic thrombophlebitis of intracranial or intraspinal venous sinuses and veins

Septic thrombosis of intracranial or intraspinal venous sinuses and veins

EXCLUDES 1 intracranial phlebitis and thrombophlebitis complicating:

abortion, ectopic or molar pregnancy (O00-O07, O08.7)

pregnancy, childbirth and the puerperium (O22.5, O87.3)

nonpyogenic intracranial phlebitis and thrombophlebitis (I67.6)

EXCLUDES 2 intracranial phlebitis and thrombophlebitis complicating nonpyogenic intraspinal phlebitis and thrombophlebitis (G95.1)

DEF: Inflammation and formation of a blood clot in a vein within the brain or spine, or their linings.

G09 Sequelae of inflammatory diseases of central nervous system

NOTE

Category G09 is to be used to indicate conditions whose primary classification is to G00-G08 as the cause of sequelae, themselves classifiable elsewhere. The "sequelae" include conditions specified as residuals.

Code first condition resulting from (sequela) of inflammatory diseases of central nervous system

Systemic atrophies primarily affecting the central nervous system (G10-G14)

G10 Huntington's disease CC MCC

Huntington's chorea

Huntington's dementia

Code also dementia in other diseases classified elsewhere without behavioral disturbance (F02.80)

DEF: Genetic disease caused by degeneration of nerve cells in the brain, characterized by chronic progressive mental deterioration. Dementia and death occur within 15 to 20 years of onset.

✓4th G11 Hereditary ataxia

EXCLUDES2 cerebral palsy (G80.-)
hereditary and idiopathic neuropathy (G60.-)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Glaucoma

1) Assigning glaucoma codes

Assign as many codes from category H40, Glaucoma, as needed to identify the type of glaucoma, the affected eye, and the glaucoma stage.

2) Bilateral glaucoma with same type and stage

When a patient has bilateral glaucoma and both eyes are documented as being the same type and stage, and there is a code for bilateral glaucoma, report only the code for the type of glaucoma, bilateral, with the seventh character for the stage.

Bilateral severe stage pigmentary glaucoma

H40.1333 Pigmentary glaucoma, bilateral, severe stage

Explanation: In this scenario, the patient has the same type and stage of glaucoma in both eyes. As this type of glaucoma has a code for bilateral, assign only the code for the bilateral glaucoma with the seventh character for the stage.

When a patient has bilateral glaucoma and both eyes are documented as being the same type and stage, and the classification does not provide a code for bilateral glaucoma (i.e. subcategories H40.10 and H40.20) report only one code for the type of glaucoma with the appropriate seventh character for the stage.

Bilateral open-angle glaucoma; not specified as to type and stage indeterminate in both eyes

H40.10X4 Unspecified open-angle glaucoma, indeterminate stage

Explanation: In this scenario, the patient has glaucoma of the same type and stage of both eyes, but there is no code specifically for bilateral glaucoma. Only one code is assigned with the appropriate seventh character for the stage.

3) Bilateral glaucoma stage with different types or stages

When a patient has bilateral glaucoma and each eye is documented as having a different type or stage, and the classification distinguishes laterality, assign the appropriate code for each eye rather than the code for bilateral glaucoma.

When a patient has bilateral glaucoma and each eye is documented as having a different type, and the classification does not distinguish laterality (i.e. subcategories H40.10 and H40.20), assign one code for each type of glaucoma with the appropriate seventh character for the stage.

Documentation relates mild, unspecified primary angle-closure glaucoma of the left eye with mild unspecified open-angle glaucoma of the right eye

H40.20X1 Unspecified primary angle-closure glaucoma, mild stage

H40.10X1 Unspecified open-angle glaucoma, mild stage

Explanation: In this scenario the patient has a different type of glaucoma in each eye and the classification does not distinguish laterality. A code for each type of glaucoma is assigned, each with the appropriate seventh character for the stage.

When a patient has bilateral glaucoma and each eye is documented as having the same type, but different stage, and the classification does not distinguish laterality (i.e. subcategories H40.10 and H40.20), assign a code for the type of glaucoma for each eye with the seventh character for the specific glaucoma stage documented for each eye.

Bilateral open-angle glaucoma, not specified as to type; the right eye is documented to be in mild stage and the left eye as being in moderate stage

H40.10X1 Unspecified open-angle glaucoma, mild stage

H40.10X2 Unspecified open-angle glaucoma, moderate stage

Explanation: In this scenario the patient has the same type of glaucoma in each eye but each eye is at a different stage, and the classification does not distinguish laterality at this subcategory level. Two codes are assigned; both codes represent the same type of glaucoma but each has a different seventh character identifying the appropriate stage for each eye.

4) Patient admitted with glaucoma and stage evolves during the admission

If a patient is admitted with glaucoma and the stage progresses during the admission, assign the code for highest stage documented.

Patient admitted with mild low-tension glaucoma of the right eye, which progresses to moderate stage during the patient's stay

H40.1212 Low-tension glaucoma, right eye, moderate stage

Explanation: When the glaucoma stage progresses during an admission, assign only the code for the highest stage documented.

5) Indeterminate stage glaucoma

Assignment of the seventh character "4" for "indeterminate stage" should be based on the clinical documentation. The seventh character "4" is used for glaucomas whose stage cannot be clinically determined. This seventh character should not be confused with the seventh character "0", unspecified, which should be assigned when there is no documentation regarding the stage of the glaucoma.

b. Blindness

If "blindness" or "low vision" of both eyes is documented but the visual impairment category is not documented, assign code H54.3, Unqualified visual loss, both eyes. If "blindness" or "low vision" in one eye is documented but the visual impairment category is not documented, assign a code from H54.6-, Unqualified visual loss, one eye. If "blindness" or "visual loss" is documented without any information about whether one or both eyes are affected, assign code H54.7, Unspecified visual loss.

Blindness in 89-year-old male

H54.7 Unspecified visual loss

Explanation: Blindness is stated, but there is no mention of whether one or both eyes are affected or the severity of this visual impairment.

Chapter 7. Diseases of the Eye and Adnexa (H00-H59)

NOTE

Use an external cause code following the code for the eye condition, if applicable, to identify the cause of the eye condition

EXCLUDES 2

certain conditions originating in the perinatal period (P04-P96)
certain infectious and parasitic diseases (A00-B99)
complications of pregnancy, childbirth and the puerperium (O00-O9A)
congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)
diabetes mellitus related eye conditions (E09.3-, E10.3-, E11.3-, E13.3-)
endocrine, nutritional and metabolic diseases (E00-E88)
injury (trauma) of eye and orbit (S05.-)
injury, poisoning and certain other consequences of external causes (S00-T88)
neoplasms (C00-D49)
symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)
syphilis related eye disorders (A50.01, A50.3-, A51.43, A52.71)

This chapter contains the following blocks:

- H00-H05 Disorders of eyelid, lacrimal system and orbit
- H10-H11 Disorders of conjunctiva
- H15-H22 Disorders of sclera, cornea, iris and ciliary body
- H25-H28 Disorders of lens

Blindness NOS according to USA definition

EXCLUDES 1 legal blindness with specification of impairment level (H54.0-H54.7)**NOTE**

The table below gives a classification of severity of visual impairment recommended by a WHO Study Group on the Prevention of Blindness, Geneva, 6-10 November 1972.

The term "low vision" in category H54 comprises categories 1 and 2 of the table, the term "blindness" categories 3, 4 and 5, and the term "unqualified visual loss" category 9.

If the extent of the visual field is taken into account, patients with a field no greater than 10° but greater than 5° around central fixation should be placed in category 3 and patients with a field no greater than 5° around central fixation should be placed in category 4, even if the central acuity is not impaired.

Category of visual impairment	Visual acuity with best possible correction	
	Maximum less than:	Minimum equal to or better than:
1	6/18 3/10 (0.3) 20/70	6/60 1/10 (0.1) 20/200
2	6/60 1/10 (0.1) 20/200	3/60 1/20 (0.05) 20/400
3	3/60 1/200 (0.05) 20/400	1/60 (finger counting at one meter) 1/50 (0.02) 5/300 (20/1200)
4	1/60 (finger counting at one meter) 1/50 (0.02) 5/300	Light perception

Chapter 8. Diseases of the Ear and Mastoid Process (H60-H95)

NOTE

Use an external cause code following the code for the ear condition, if applicable, to identify the cause of the ear condition

EXCLUDES2

certain conditions originating in the perinatal period (P04-P96)
certain infectious and parasitic diseases (A00-B99)
complications of pregnancy, childbirth and the puerperium (O00-O9A)
congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)
endocrine, nutritional and metabolic diseases (E00-E88)
injury, poisoning and certain other consequences of external causes (S00-T88)
neoplasms (C00-D49)
symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)

This chapter contains the following blocks:

- H60-H62 Diseases of external ear
- H65-H75 Diseases of middle ear and mastoid
- H80-H83 Diseases of inner ear
- H90-H94 Other disorders of ear

Chapter 9. Diseases of the Circulatory System (I00–I99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Hypertension

The classification presumes a causal relationship between hypertension and heart involvement and between hypertension and kidney involvement, as the two conditions are linked by the term "with" in the Alphabetic Index. These conditions should be coded as related even in the absence of provider documentation explicitly linking them, unless the documentation clearly states the conditions are unrelated.

For hypertension and conditions not specifically linked by relational terms such as "with," "associated with" or "due to" in the classification, provider documentation must link the conditions in order to code them as related.

1) Hypertension with heart disease

Hypertension with heart conditions classified to I50.- or I51.4–I51.7, I51.89, I51.9, are assigned to a code from category I11, Hypertensive heart disease. Use additional code(s) from category I50, Heart failure, to identify the type(s) of heart failure in those patients with heart failure.

The same heart conditions (I50.-, I51.4–I51.7, I51.89, I51.9) with hypertension are coded separately if the provider has documented they are unrelated to the hypertension. Sequence according to the circumstances of the admission/encounter.

Patient is admitted in left heart failure. Patient also has a history of hypertension managed by medication.

I11.0 Hypertensive heart disease with heart failure

I50.1 Left ventricular failure, unspecified

Explanation: Without a diagnostic statement to the contrary, hypertension and heart failure have an assumed causal relationship, and a combination code should be used. An additional code to identify the type of heart failure (I50.-) should also be provided.

2) Hypertensive chronic kidney disease

Assign codes from category I12, Hypertensive chronic kidney disease, when both hypertension and a condition classifiable to category N18, Chronic kidney disease (CKD), are present. CKD should not be coded as hypertensive if the provider indicates the CKD is not related to the hypertension.

The appropriate code from category N18 should be used as a secondary code with a code from category I12 to identify the stage of chronic kidney disease.

See Section I.C.14. Chronic kidney disease.

If a patient has hypertensive chronic kidney disease and acute renal failure, **the acute renal failure should also be coded. Sequence according to the circumstances of the admission/encounter.**

Patient is admitted with stage IV chronic kidney disease (CKD) due to polycystic kidney disease. Patient also is on lisinopril for hypertension.

N18.4 Chronic kidney disease, stage 4 (severe)

Q61.3 Polycystic kidney, unspecified

I10 Essential (primary) hypertension

Explanation: A combination code describing a relationship between hypertension and CKD is not used because the physician documentation identifies the polycystic kidney disease as the cause for the CKD.

3) Hypertensive heart and chronic kidney disease

Assign codes from combination category I13, Hypertensive heart and chronic kidney disease, when there is hypertension with both heart and kidney involvement. If heart failure is present, assign an additional code from category I50 to identify the type of heart failure.

The appropriate code from category N18, Chronic kidney disease, should be used as a secondary code with a code from category I13 to identify the stage of chronic kidney disease.

See Section I.C.14. Chronic kidney disease.

The codes in category I13, Hypertensive heart and chronic kidney disease, are combination codes that include hypertension, heart disease and chronic kidney disease. The includes note at I13 specifies that the conditions included at I11 and I12 are included together in I13. If a patient

has hypertension, heart disease and chronic kidney disease, then a code from I13 should be used, not individual codes for hypertension, heart disease and chronic kidney disease, or codes from I11 or I12.

For patients with both acute renal failure and chronic kidney disease, **the acute renal failure should also be coded. Sequence according to the circumstances of the admission/encounter.**

Patient admitted with acute tubular necrosis, history of hypertensive heart and kidney disease with congestive heart failure and stage 3a chronic kidney disease

N17.0 Acute kidney failure with tubular necrosis

I13.0 Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease

I50.9 Heart failure, unspecified

N18.31 Chronic kidney disease, stage 3a

Explanation: It is appropriate to report an acute kidney failure code and a chronic kidney failure code when both conditions are treated during an encounter. In this instance, the acute renal failure was the focus of treatment and therefore sequenced as principal diagnosis. Combination codes in category I13 are used to report conditions classifiable to both categories I11 and I12. Do not report conditions classifiable to I11 and I12 separately. Use additional codes to report the type of heart failure and stage of CKD.

4) Hypertensive cerebrovascular disease

For hypertensive cerebrovascular disease, first assign the appropriate code from categories I60–I69, followed by the appropriate hypertension code.

Rupture of cerebral aneurysm caused by malignant hypertension

I60.7 Nontraumatic subarachnoid hemorrhage from unspecified intracranial artery

I10 Essential (primary) hypertension

Explanation: Hypertensive cerebrovascular disease requires two codes: the appropriate I60–I69 code followed by the appropriate hypertension code.

5) Hypertensive retinopathy

Subcategory H35.0, Background retinopathy and retinal vascular changes, should be used with a code from category I10–I15, Hypertensive disease to include the systemic hypertension. The sequencing is based on the reason for the encounter.

6) Hypertension, secondary

Secondary hypertension is due to an underlying condition. Two codes are required: one to identify the underlying etiology and one from category I15 to identify the hypertension. Sequencing of codes is determined by the reason for admission/encounter.

Renovascular hypertension due to renal artery atherosclerosis

I15.0 Renovascular hypertension

I70.1 Atherosclerosis of renal artery

Explanation: Secondary hypertension requires two codes: a code to identify the etiology and the appropriate I15 code.

7) Hypertension, transient

Assign code R03.0, Elevated blood pressure reading without diagnosis of hypertension, unless patient has an established diagnosis of hypertension. Assign code O13.-, Gestational [pregnancy-induced] hypertension without significant proteinuria, or O14.-, Pre-eclampsia, for transient hypertension of pregnancy.

8) Hypertension, controlled

This diagnostic statement usually refers to an existing state of hypertension under control by therapy. Assign the appropriate code from categories I10–I15, Hypertensive diseases.

9) Hypertension, uncontrolled

Uncontrolled hypertension may refer to untreated hypertension or hypertension not responding to current therapeutic regimen. In either case, assign the appropriate code from categories I10–I15, Hypertensive diseases.

10) Hypertensive crisis

Assign a code from category I16, Hypertensive crisis, for documented hypertensive urgency, hypertensive emergency or unspecified

hypertensive crisis. Code also any identified hypertensive disease (I10-I15). The sequencing is based on the reason for the encounter.

11) Pulmonary hypertension

Pulmonary hypertension is classified to category I27, Other pulmonary heart diseases. For secondary pulmonary hypertension (I27.1, I27.2-), code also any associated conditions or adverse effects of drugs or toxins. The sequencing is based on the reason for the encounter, except for adverse effects of drugs (See Section I.C.19.e.).

b. Atherosclerotic coronary artery disease and angina

ICD-10-CM has combination codes for atherosclerotic heart disease with angina pectoris. The subcategories for these codes are I25.11, Atherosclerotic heart disease of native coronary artery with angina pectoris and I25.7, Atherosclerosis of coronary artery bypass graft(s) and coronary artery of transplanted heart with angina pectoris.

When using one of these combination codes it is not necessary to use an additional code for angina pectoris. A causal relationship can be assumed in a patient with both atherosclerosis and angina pectoris, unless the documentation indicates the angina is due to something other than the atherosclerosis.

If a patient with coronary artery disease is admitted due to an acute myocardial infarction (AMI), the AMI should be sequenced before the coronary artery disease.

See Section I.C.9. Acute myocardial infarction (AMI)

c. Intraoperative and postprocedural cerebrovascular accident

Medical record documentation should clearly specify the cause- and- effect relationship between the medical intervention and the cerebrovascular accident in order to assign a code for intraoperative or postprocedural cerebrovascular accident.

Proper code assignment depends on whether it was an infarction or hemorrhage and whether it occurred intraoperatively or postoperatively. If it was a cerebral hemorrhage, code assignment depends on the type of procedure performed.

Embolus cerebral infarction of the right middle cerebral artery that occurred during hip replacement surgery. The surgeon documented as due to the surgery.

197.811 Intraoperative cerebrovascular infarction during other surgery

163.411 Cerebral infarction due to embolism of right middle cerebral artery

Explanation: Code assignment for intraoperative or postprocedural cerebrovascular accident is based on the provider's documentation of a cause-and-effect relationship between the condition and the procedure. Proper code assignment also depends on whether the cerebrovascular accident was an infarction or hemorrhage, occurred intraoperatively or postoperatively, and the type of procedure performed.

d. Sequelae of cerebrovascular disease

1) Category I69, Sequelae of cerebrovascular disease

Category I69 is used to indicate conditions classifiable to categories I60-I67 as the causes of sequela (neurologic deficits), themselves classified elsewhere. These "late effects" include neurologic deficits that persist after initial onset of conditions classifiable to categories I60-I67. The neurologic deficits caused by cerebrovascular disease may be present from the onset or may arise at any time after the onset of the condition classifiable to categories I60-I67.

Codes from category I69, Sequelae of cerebrovascular disease, that specify hemiplegia, hemiparesis and monoplegia identify whether the dominant or nondominant side is affected. Should the affected side be documented, but not specified as dominant or nondominant, and the classification system does not indicate a default, code selection is as follows:

- For ambidextrous patients, the default should be dominant.
- If the left side is affected, the default is non-dominant.
- If the right side is affected, the default is dominant.

2) Codes from category I69 with codes from I60-I67

Codes from category I69 may be assigned on a health care record with codes from I60-I67, if the patient has a current cerebrovascular disease and deficits from an old cerebrovascular disease.

3) Codes from category I69 and personal history of transient ischemic attack (TIA) and cerebral infarction (Z86.73)

Codes from category I69 should not be assigned if the patient does not have neurologic deficits.

See Section I.C.21. 4. History (of) for use of personal history codes

e. Acute myocardial infarction (AMI)

1) Type 1 ST elevation myocardial infarction (STEMI) and non ST elevation myocardial infarction (NSTEMI)

The ICD-10-CM codes for type 1 acute myocardial infarction (AMI) identify the site, such as anterolateral wall or true posterior wall. Subcategories I21.0-I21.2 and code I21.3 are used for type 1 ST elevation myocardial infarction (STEMI). Code I21.4, Non-ST elevation (NSTEMI) myocardial infarction, is used for type 1 non-ST elevation myocardial infarction (NSTEMI) and nontransmural MIs.

If a type 1 NSTEMI evolves to STEMI, assign the STEMI code. If a type 1 STEMI converts to NSTEMI due to thrombolytic therapy, it is still coded as STEMI.

For encounters occurring while the myocardial infarction is equal to, or less than, four weeks old, including transfers to another acute setting or a postacute setting, and the myocardial infarction meets the definition for "other diagnoses" (see Section III, Reporting Additional Diagnoses), codes from category I21 may continue to be reported. For encounters after the 4 week time frame and the patient is still receiving care related to the myocardial infarction, the appropriate aftercare code should be assigned, rather than a code from category I21. For old or healed myocardial infarctions not requiring further care, code I25.2, Old myocardial infarction, may be assigned.

2) Acute myocardial infarction, unspecified

Code I21.9, Acute myocardial infarction, unspecified, is the default for unspecified acute myocardial infarction or unspecified type. If only type 1 STEMI or transmural MI without the site is documented, assign code I21.3, ST elevation (STEMI) myocardial infarction of unspecified site.

3) AMI documented as nontransmural or subendocardial but site provided

If an AMI is documented as nontransmural or subendocardial, but the site is provided, it is still coded as a subendocardial AMI.

See Section I.C.21.3 for information on coding status post administration of tPA in a different facility within the last 24 hours.

4) Subsequent acute myocardial infarction

A code from category I22, Subsequent ST elevation (STEMI) and non-ST elevation (NSTEMI) myocardial infarction, is to be used when a patient who has suffered a type 1 or unspecified AMI has a new AMI within the 4 week time frame of the initial AMI. A code from category I22 must be used in conjunction with a code from category I21. The sequencing of the I22 and I21 codes depends on the circumstances of the encounter.

Do not assign code I22 for subsequent myocardial infarctions other than type 1 or unspecified. For subsequent type 2 AMI assign only code I21.A1. For subsequent type 4 or type 5 AMI, assign only code I21.A9.

If a subsequent myocardial infarction of one type occurs within 4 weeks of a myocardial infarction of a different type, assign the appropriate codes from category I21 to identify each type. Do not assign a code from I22. Codes from category I22 should only be assigned if both the initial and subsequent myocardial infarctions are type 1 or unspecified.

5) Other types of myocardial infarction

The ICD-10-CM provides codes for different types of myocardial infarction. Type 1 myocardial infarctions are assigned to codes I21.0-I21.4.

Type 2 myocardial infarction (myocardial infarction due to demand ischemia or secondary to ischemic imbalance) is assigned to code I21.A1, Myocardial infarction type 2 with the underlying cause coded first. Do not assign code I24.8, Other forms of acute ischemic heart disease, for the demand ischemia. If a type 2 AMI is described as NSTEMI or STEMI, only assign code I21.A1. Codes I21.01-I21.4 should only be assigned for type 1 AMIs.

Acute myocardial infarctions type 3, 4a, 4b, 4c and 5 are assigned to code I21.A9, Other myocardial infarction type.

The "Code also" and "Code first" notes should be followed related to complications, and for coding of postprocedural myocardial infarctions during or following cardiac surgery.

Myocardial infarction involving the left circumflex artery occurring during PTCA with stent insertion to treat coronary artery disease

I25.10 Atherosclerotic heart disease of native coronary artery without angina pectoris

I97.790 Other intraoperative cardiac functional disturbances during cardiac surgery

I21.A9 Other myocardial infarction type

Explanation: A myocardial infarction occurring during a revascularization procedure is not considered a type 1 myocardial infarction (MI) and should not be coded to a type 1 MI code (I21.0-, I21.1-, I21.2-, I21.3) even when the specific site of the MI is documented. According to the code first instruction at I21.A9, the complication code (I97.790) should be sequenced before code I21.A9.

Acute rheumatic fever (I00-I02)

DEF: Inflammatory disease that can follow a throat infection by group A streptococci. Complications can involve the joints (arthritis), subcutaneous tissue (nodules), skin (erythema marginatum), heart (carditis), or brain (chorea).

I00 Rheumatic fever without heart involvement

INCLUDES arthritis, rheumatic, acute or subacute

EXCLUDES1 rheumatic fever with heart involvement (I01.0-I01.9)

I01 Rheumatic fever with heart involvement

EXCLUDES1 chronic diseases of rheumatic origin (I05-I09) unless rheumatic fever is also present or there is evidence of reactivation or activity of the rheumatic process

I01.0 Acute rheumatic pericarditis

Any condition in I00 with pericarditis

Rheumatic pericarditis (acute)

EXCLUDES1 acute pericarditis not specified as rheumatic (I30.-)

I01.1 Acute rheumatic endocarditis

Any condition in I00 with endocarditis or valvulitis

Acute rheumatic valvulitis

I01.2 Acute rheumatic myocarditis

Any condition in I00 with myocarditis

I01.8 Other acute rheumatic heart disease

Any condition in I00 with other or multiple types of heart involvement

Acute rheumatic pancarditis

I01.9 Acute rheumatic heart disease, unspecified

Any condition in I00 with unspecified type of heart involvement

Rheumatic carditis, acute

Rheumatic heart disease, active or acute

INCLUDES Sydenham's chorea

EXCLUDES1 chorea NOS (G25.5)

Huntington's chorea (G10)

I02.0 Rheumatic chorea with heart involvement

Chorea NOS with heart involvement

Rheumatic chorea with heart involvement of any type classifiable under I01.-

I02.9 Rheumatic chorea without heart involvement

Rheumatic chorea NOS

Chronic rheumatic heart diseases (I05-I09)**I05 Rheumatic mitral valve diseases**

INCLUDES conditions classifiable to both I05.0 and I05.2-I05.9, whether specified as rheumatic or not

EXCLUDES1 mitral valve disease specified as nonrheumatic (I34.-)
 mitral valve disease with aortic and/or tricuspid valve involvement (I08.-)

I05.0 Rheumatic mitral stenosis

Mitral (valve) obstruction (rheumatic)

DEF: Narrowing of the mitral valve between the left atrium and left ventricle due to rheumatic fever. Symptoms include shortness of breath during or after exercise, fatigue, palpitations, chest discomfort, and swelling of feet or legs.

I05.1 Rheumatic mitral insufficiency

Rheumatic mitral incompetence

Rheumatic mitral regurgitation

EXCLUDES1 mitral insufficiency not specified as rheumatic (I34.0)

I05.2 Rheumatic mitral stenosis with insufficiency

Rheumatic mitral stenosis with incompetence or regurgitation

I05.8 Other rheumatic mitral valve diseases

Rheumatic mitral (valve) failure

I05.9 Rheumatic mitral valve disease, unspecified

Rheumatic mitral (valve) disorder (chronic) NOS

I06 Rheumatic aortic valve diseases

EXCLUDES1 aortic valve disease not specified as rheumatic (I35.-)
 aortic valve disease with mitral and/or tricuspid valve involvement (I08.-)

I06.0 Rheumatic aortic stenosis

Rheumatic aortic (valve) obstruction

I06.1 Rheumatic aortic insufficiency

Rheumatic aortic incompetence

Rheumatic aortic regurgitation

I06.2 Rheumatic aortic stenosis with insufficiency

Rheumatic aortic stenosis with incompetence or regurgitation

I06.8 Other rheumatic aortic valve diseases**I06.9 Rheumatic aortic valve disease, unspecified**

Rheumatic aortic (valve) disease NOS

I07 Rheumatic tricuspid valve diseases

INCLUDES rheumatic tricuspid valve diseases specified as rheumatic or unspecified

EXCLUDES1 tricuspid valve disease specified as nonrheumatic (I36.-)
 tricuspid valve disease with aortic and/or mitral valve involvement (I08.-)

I07.0 Rheumatic tricuspid stenosis

Tricuspid (valve) stenosis (rheumatic)

I07.1 Rheumatic tricuspid insufficiency

Tricuspid (valve) insufficiency (rheumatic)

I07.2 Rheumatic tricuspid stenosis and insufficiency**I07.8 Other rheumatic tricuspid valve diseases****I07.9 Rheumatic tricuspid valve disease, unspecified**

Rheumatic tricuspid valve disorder NOS

I08 Multiple valve diseases

INCLUDES multiple valve diseases specified as rheumatic or unspecified

EXCLUDES1 endocarditis, valve unspecified (I38)
 multiple valve disease specified as nonrheumatic (I34.-, I35.-, I36.-, I37.-, I38.-, Q22.-, Q23.-, Q24.8-)
 rheumatic valve disease NOS (I09.1)

I08.0 Rheumatic disorders of both mitral and aortic valves

EXCLUDES1 *angina pectoris with atherosclerotic heart disease of native coronary arteries (I25.1-)*
atherosclerosis of coronary artery bypass graft(s) and coronary artery of transplanted heart with angina pectoris (I25.7-)
postinfarction angina (I23.7)

DEF: Chest pain due to reduced blood flow resulting in a lack of oxygen to the heart muscles.

I20.0 Unstable angina

CC MCC

- Accelerated angina
- Crescendo angina
- De novo effort angina
- Intermediate coronary syndrome
- Preinfarction syndrome
- Worsening effort angina

DEF: Condition representing an intermediate stage between angina of effort and acute myocardial infarction.

I20.1 Angina pectoris with documented spasm

CC MCC

- Angiospastic angina
- Prinzmetal angina
- Spasm-induced angina
- Variant angina

I20.8 Other forms of angina pectoris

MCC

- Angina equivalent
- Angina of effort
- Coronary slow flow syndrome
- Stable angina
- Stenocardia
- Use additional code(s) for symptoms associated with angina equivalent

I20.9 Angina pectoris, unspecified

MCC

- Angina NOS
- Anginal syndrome
- Cardiac angina
- Ischemic chest pain

I21 Acute myocardial infarction**INCLUDES**

- cardiac infarction
- coronary (artery) embolism
- coronary (artery) occlusion
- coronary (artery) rupture
- coronary (artery) thrombosis
- infarction of heart, myocardium, or ventricle
- myocardial infarction specified as acute or with a stated duration of 4 weeks (28 days) or less from onset

Use additional code, if applicable, to identify:

- exposure to environmental tobacco smoke (Z77.22)
- history of tobacco dependence (Z87.891)
- occupational exposure to environmental tobacco smoke (Z57.31)
- status post administration of tPA (rTPA) in a different facility within the last 24 hours prior to admission to current facility (Z92.82)
- tobacco dependence (F17.-)
- tobacco use (Z72.0)

EXCLUDES2 *old myocardial infarction (I25.2)*
postmyocardial infarction syndrome (I24.1)
subsequent type 1 myocardial infarction (I22.-)

I21.09 ST elevation (STEMI) myocardial infarction involving other coronary artery of anterior wall

MCC MCC

Acute transmural myocardial infarction of anterior wall

- Anteroapical transmural (Q wave) infarction (acute)
- Anterolateral transmural (Q wave) infarction (acute)
- Anteroseptal transmural (Q wave) infarction (acute)
- Transmural (Q wave) infarction (acute) (of) anterior (wall) NOS

AHA: 2012,4Q,102-103

I21.1 ST elevation (STEMI) myocardial infarction of inferior wall

✓ 9th

Type 1 ST elevation myocardial infarction of inferior wall

DEF: ST elevation myocardial infarction: Complete obstruction of one or more coronary arteries causing decreased blood flow (ischemia) and necrosis of myocardial muscle cells.

I21.11 ST elevation (STEMI) myocardial infarction involving right coronary artery

MCC MCC

Inferoposterior transmural (Q wave) infarction (acute)

I21.19 ST elevation (STEMI) myocardial infarction involving other coronary artery of inferior wall

MCC MCC

Acute transmural myocardial infarction of inferior wall

- Inferolateral transmural (Q wave) infarction (acute)
- Transmural (Q wave) infarction (acute) (of) diaphragmatic wall
- Transmural (Q wave) infarction (acute) (of) inferior (wall) NOS

EXCLUDES2 *ST elevation (STEMI) myocardial infarction involving left circumflex coronary artery (I21.21)*

AHA: 2012,4Q,96

I21.2 ST elevation (STEMI) myocardial infarction of other sites

✓ 9th

Type 1 ST elevation myocardial infarction of other sites

DEF: ST elevation myocardial infarction: Complete obstruction of one or more coronary arteries causing decreased blood flow (ischemia) and necrosis of myocardial muscle cells.

I21.21 ST elevation (STEMI) myocardial infarction involving left circumflex coronary artery

MCC MCC

ST elevation (STEMI) myocardial infarction involving oblique marginal coronary artery

I21.29 ST elevation (STEMI) myocardial infarction involving other sites

MCC MCC

- Acute transmural myocardial infarction of other sites
- Apical-lateral transmural (Q wave) infarction (acute)
- Basal-lateral transmural (Q wave) infarction (acute)
- High lateral transmural (Q wave) infarction (acute)
- Lateral (wall) NOS transmural (Q wave) infarction (acute)

I21.3 ST elevation (STEMI) myocardial infarction of unspecified site

MCC MCC

Acute transmural myocardial infarction of unspecified site

Transmural (Q wave) myocardial infarction NOS
 Type 1 ST elevation myocardial infarction of unspecified site
DEF: ST elevation myocardial infarction: Complete obstruction of one or more coronary arteries causing decreased blood flow (ischemia) and necrosis of myocardial muscle cells.

I21.4 Non-ST elevation (NSTEMI) myocardial infarction

MCC MCC

Acute subendocardial myocardial infarction

Non-Q wave myocardial infarction NOS

Nontransmural myocardial infarction NOS

Type 1 non-ST elevation myocardial infarction

AHA: 2019,2Q,33; 2017,1Q,44-45

DEF: Partial obstruction of one or more coronary arteries that causes decreased blood flow (ischemia) and may cause partial thickness necrosis of myocardial muscle cells.

I21.9 Acute myocardial infarction, unspecified MCC MCC

Myocardial infarction (acute) NOS

✓ 51 I21.A Other type of myocardial infarction

AHA: 2019,2Q,5

I21.A1 Myocardial infarction type 2 MCC MCC

Myocardial infarction due to demand ischemia

Myocardial infarction secondary to ischemic imbalance

Code first the underlying cause, such as:

anemia (D50.0–D64.9)

chronic obstructive pulmonary disease (J44.-)

paroxysmal tachycardia (I47.0–I47.9)

shock (R57.0–R57.9)

AHA: 2019,4Q,53; 2017,4Q,13–14

DEF: Often referred to as due to demand ischemia, myocardial infarction (MI) type 2 refers to an MI due to ischemia and necrosis resulting from an oxygen imbalance to the heart. This mismatch between oxygen decreased supply and increased demand is caused by conditions other than coronary artery disease such as vasospasm, embolism, anemia, hypertension, hypotension, or arrhythmias.

I21.A9 Other myocardial infarction type MCC MCC

Myocardial infarction associated with revascularization procedure

Myocardial infarction type 3

Myocardial infarction type 4a

Myocardial infarction type 4b

Myocardial infarction type 4c

Myocardial infarction type 5

Code first, if applicable, postprocedural myocardial infarction following cardiac surgery (I97.190), or postprocedural myocardial infarction during cardiac surgery (I97.790)

Code also complication, if known and applicable, such as:

(acute) stent occlusion (T82.897-)

(acute) stent stenosis (T82.855-)

(acute) stent thrombosis (T82.867-)

cardiac arrest due to underlying cardiac condition (I46.2)

complication of percutaneous coronary intervention (PCI) (I97.89)

occlusion of coronary artery bypass graft (T82.218-)

✓A¹ **I69 Sequelae of cerebrovascular disease**

NOTE

Category I69 is to be used to indicate conditions in I60–I67 as the cause of sequelae. The "sequelae" include conditions specified as such or as residuals which may occur at any time after the onset of the causal condition

EXCLUDES 1 personal history of cerebral infarction without residual deficit (Z86.73)
 personal history of prolonged reversible ischemic neurologic deficit (PRIND) (Z86.73)
 personal history of reversible ischemic neurologic deficit (RIND) (Z86.73)
 sequelae of traumatic intracranial injury (S06.-)

AHA: 2020,2Q,29; 2017,1Q,47; 2016,4Q,28; 2015,1Q,25; 2012,4Q,106

TIP: Weakness on one side of the body (unilateral weakness) documented as secondary to old cerebrovascular disease is synonymous with hemiparesis/hemiplegia. Weakness of one limb documented as secondary to old cerebrovascular disease is synonymous with monoplegia.

TIP: For codes describing hemiplegia, hemiparesis, and monoplegia; if the documentation identifies the affected side but not whether it is the dominant or nondominant side, the default is as follows: for ambidextrous patients, the default is dominant; when the left side is affected, the default is nondominant; and when the right side is affected, the default is dominant.

Chapter 10. Diseases of the Respiratory System (J00–J99), U07.0

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Chronic obstructive pulmonary disease [COPD] and asthma

1) Acute exacerbation of chronic obstructive bronchitis and asthma

The codes in categories J44 and J45 distinguish between uncomplicated cases and those in acute exacerbation. An acute exacerbation is a worsening or a decompensation of a chronic condition. An acute exacerbation is not equivalent to an infection superimposed on a chronic condition, though an exacerbation may be triggered by an infection.

Vancomycin IV was started to treat a patient with acute pneumonia due to *Streptococcus pneumoniae*. Patient also with acute exacerbation of COPD continued on home meds.

J13	Pneumonia due to <i>Streptococcus pneumoniae</i>
J44.0	Chronic obstructive pulmonary disease with (acute) lower respiratory infection
J44.1	Chronic obstructive pulmonary disease with (acute) exacerbation

Explanation: ICD-10-CM uses combination codes to create organism-specific classifications for acute pneumonia. Category J44 codes include combination codes with severity components, which differentiate between COPD with acute lower respiratory infection (acute pneumonia), COPD with acute exacerbation, and COPD without mention of a complication (unspecified).

An acute exacerbation is a worsening or a decompensation of a chronic condition. An acute exacerbation is not equivalent to an infection superimposed on a chronic condition, though an exacerbation may be triggered by an infection, as in this example. Treatment of the pneumonia necessitated the inpatient admission. Instructional notes at J44.0 say to "code also to identify the infection," which informs the coder that another code must be assigned if applicable. Sequencing of the pneumonia and COPD exacerbation are governed by the Section II, "Selection of Principal Diagnosis," guidelines. In this case it was the pneumonia that was "chiefly responsible for occasioning the admission" with the IV vancomycin treatment.

Exacerbation of moderate persistent asthma with status asthmaticus

J45.42 **Moderate persistent asthma with status asthmaticus**

Explanation: Category J45 Asthma includes severity-specific subcategories and fifth-character codes to distinguish between uncomplicated cases, those in acute exacerbation, and those with status asthmaticus.

b. Acute respiratory failure

1) Acute respiratory failure as principal diagnosis

A code from subcategory J96.0, Acute respiratory failure, or subcategory J96.2, Acute and chronic respiratory failure, may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasioning the admission to the hospital, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter-specific coding guidelines (such as obstetrics, poisoning, HIV, newborn) that provide sequencing direction take precedence.

Acute hypoxic respiratory failure due to COPD exacerbation

J96.01	Acute respiratory failure with hypoxia
J44.1	Chronic obstructive pulmonary disease with (acute) exacerbation

Explanation: Category J96 classifies respiratory failure with combination codes that designate the severity and the presence of hypoxia and hypercapnia. Code J96.01 is sequenced as the first-listed diagnosis, as the reason for the admission. Respiratory failure may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasioning the admission to the hospital and the selection is supported by the Alphabetic Index and Tabular List.

2) Acute respiratory failure as secondary diagnosis

Respiratory failure may be listed as a secondary diagnosis if it occurs after admission, or if it is present on admission, but does not meet the definition of principal diagnosis.

Acute respiratory failure due to accidental oxycodone overdose

T40.2X1A **Poisoning by other opioids, accidental (unintentional), initial encounter**

J96.00 **Acute respiratory failure, unspecified whether with hypoxia or hypercapnia**

Explanation: Respiratory failure may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasioning the admission to the hospital, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter-specific coding guidelines, such as poisoning, that provide sequencing direction take precedence. When coding a poisoning or reaction to the improper use of a medication (e.g. overdose, wrong substance given or taken in error, wrong route of administration), first assign the appropriate code from categories T36–T50. Use additional code(s) for all manifestations of the poisoning. In this instance, the respiratory failure is a manifestation of the poisoning and is sequenced as a secondary diagnosis.

Acute pneumococcal pneumonia with subsequent development of acute respiratory failure

J13 **Pneumonia due to *Streptococcus pneumoniae***

J96.00 **Acute respiratory failure, unspecified whether with hypoxia or hypercapnia**

Explanation: Acute respiratory failure may be listed as a secondary diagnosis if it occurs after admission, or if it is present on admission but does not meet the definition of principal diagnosis.

3) Sequencing of acute respiratory failure and another acute condition

When a patient is admitted with respiratory failure and another acute condition, (e.g., myocardial infarction, cerebrovascular accident, aspiration pneumonia), the principal diagnosis will not be the same in every situation. This applies whether the other acute condition is a respiratory or nonrespiratory condition. Selection of the principal diagnosis will be dependent on the circumstances of admission. If both the respiratory failure and the other acute condition are equally responsible for occasioning the admission to the hospital, and there are no chapter-specific sequencing rules, the guideline regarding two or more diagnoses that equally meet the definition for principal diagnosis (Section II, C.) may be applied in these situations.

If the documentation is not clear as to whether acute respiratory failure and another condition are equally responsible for occasioning the admission, query the provider for clarification.

Acute pneumococcal pneumonia and acute respiratory failure, both present on admission

J96.00 **Acute respiratory failure, unspecified whether with hypoxia or hypercapnia**

J13 **Pneumonia due to *Streptococcus pneumoniae***

Explanation: When a patient is admitted with respiratory failure and another acute condition, such as a bacterial pneumonia, the principal diagnosis is not the same in every situation. This applies whether the other acute condition is a respiratory or nonrespiratory condition. The principal diagnosis depends on the circumstances of admission.

c. Influenza due to certain identified influenza viruses

Code only confirmed cases of influenza due to certain identified influenza viruses (category J09), and due to other identified influenza virus (category J10). This is an exception to the hospital inpatient guideline Section II, H. (Uncertain Diagnosis).

In this context, "confirmation" does not require documentation of positive laboratory testing specific for avian or other novel influenza A or other identified influenza virus. However, coding should be based on the provider's diagnostic statement that the patient has avian influenza, or other novel influenza A, for category J09, or has another particular identified strain of influenza, such as H1N1 or H3N2, but not identified as novel or variant, for category J10.

If the provider records "suspected" or "possible" or "probable" avian influenza, or novel influenza, or other identified influenza, then the appropriate influenza code from category J11, Influenza due to unidentified influenza virus, should be assigned. A code from category J09, Influenza due to certain identified influenza viruses, should not be assigned nor should a code from category J10, Influenza due to other identified influenza virus.

Influenza due to avian influenza virus with pneumonia

J09.X1 Influenza due to identified novel influenza A virus with pneumonia

Explanation: Codes in category J09 Influenza due to certain identified influenza viruses should be assigned only for confirmed cases. "Confirmation" does not require positive laboratory testing of a specific influenza virus but does need to be based on the provider's diagnostic statement, which should not include terms such as "possible," "probable," or "suspected."

d. Ventilator associated pneumonia

1) Documentation of ventilator associated pneumonia

As with all procedural or postprocedural complications, code assignment is based on the provider's documentation of the relationship between the condition and the procedure.

Code J95.851, Ventilator associated pneumonia, should be assigned only when the provider has documented ventilator associated pneumonia (VAP). An additional code to identify the organism (e.g., *Pseudomonas aeruginosa*, code B96.5) should also be assigned. Do not assign an additional code from categories J12-J18 to identify the type of pneumonia.

Code J95.851 should not be assigned for cases where the patient has pneumonia and is on a mechanical ventilator and the provider has not specifically stated that the pneumonia is ventilator-associated pneumonia. If the documentation is unclear as to whether the patient has a pneumonia that is a complication attributable to the mechanical ventilator, query the provider.

2) Ventilator associated pneumonia develops after admission

A patient may be admitted with one type of pneumonia (e.g., code J13, Pneumonia due to *Streptococcus pneumoniae*) and subsequently develop VAP. In this instance, the principal diagnosis would be the appropriate code from categories J12-J18 for the pneumonia diagnosed at the time of admission. Code J95.851, Ventilator associated pneumonia, would be assigned as an additional diagnosis when the provider has also documented the presence of ventilator associated pneumonia.

Patient with pneumonia due to *Klebsiella pneumoniae* develops superimposed MRSA ventilator-associated pneumonia

J15.0 Pneumonia due to *Klebsiella pneumoniae*

J95.851 Ventilator associated pneumonia

B95.62 Methicillin resistant *Staphylococcus aureus* infection as the cause of diseases classified elsewhere

Explanation: Code assignment for ventilator-associated pneumonia is based on the provider's documentation of the relationship between the condition and the procedure and is reported only when the provider has documented ventilator-associated pneumonia (VAP).

A patient may be admitted with one type of pneumonia and subsequently develop VAP. In this example, the principal diagnosis code describes the pneumonia diagnosed at the time of admission, with code J95.851 Ventilator associated pneumonia, assigned as secondary.

e. Vaping-related disorders

For patients presenting with condition(s) related to vaping, assign code U07.0, Vaping-related disorder, as the principal diagnosis. For lung injury due to vaping, assign only code U07.0. Assign additional codes for other manifestations, such as acute respiratory failure (subcategory J96.0-) or pneumonitis (code J68.0).

Associated respiratory signs and symptoms due to vaping, such as cough, shortness of breath, etc., are not coded separately, when a definitive diagnosis has been established. However, it would be appropriate to code separately any gastrointestinal symptoms, such as diarrhea and abdominal pain.

23-year-old patient with history of anxiety disorder admitted with fever, dyspnea and nonproductive cough. Patient's respiratory function continued to clinically worsen, requiring intubation for suspected ARDS and required OGT suction for coffee ground hematemesis. Following extubating, patient confirmed the use of THC vaping cartridge preceding development of symptoms. Discharge diagnosis is ARDS due to EVALI and anxiety disorder.

U07.0 Vaping related disorder

J80 Acute respiratory distress syndrome

K92.0 Hematemesis

F41.9 Anxiety disorder, unspecified

Explanation: Codes U07.0 and J80 represent the vaping-related disorder and its associated manifestation, the acute respiratory distress syndrome (ARDS). The symptoms that brought the patient in are not coded separately because these are integral to the vaping disorder and the ARDS, unlike the hematemesis (vomiting blood) a gastrointestinal symptom that is not integral to either of these conditions.

Chapter 10. Diseases of the Respiratory System (J00-J99)

NOTE When a respiratory condition is described as occurring in more than one site and is not specifically indexed, it should be classified to the lower anatomic site (e.g., tracheobronchitis to bronchitis in J40).

Use additional code, where applicable, to identify:

- exposure to environmental tobacco smoke (Z77.22)
- exposure to tobacco smoke in the perinatal period (P96.81)
- history of tobacco dependence (Z87.891)
- occupational exposure to environmental tobacco smoke (Z57.31)

TIP: Assign J18.1 only when the provider specifically documents “lobar pneumonia” without specifying a causal organism. Lobar pneumonia may not be assumed based on an imaging report that identifies pneumonia in a specific lobe.

TIP: Documentation of lobar pneumonia or multilobar pneumonia should be coded to J18.1 when the specific organism causing the pneumonia is not identified. When the organism is documented, lobar pneumonia or multilobar pneumonia should be coded using categories J12–J16, depending on the organism that is present.

TIP: Hemoptysis (R04.2) is not customarily associated with pneumonia and may be reported separately.

J98.1 Pulmonary collapse

- EXCLUDES 1** therapeutic collapse of lung status (Z98.3)

J98.11 Atelectasis

- EXCLUDES 1** newborn atelectasis
tuberculous atelectasis (current disease) (A15)

DEF: Collapse of lung tissue affecting part or all of one lung, preventing normal oxygen absorption to healthy tissues.

J98.19 Other pulmonary collapse**J98.2 Interstitial emphysema**

- Mediastinal emphysema
- EXCLUDES 1** emphysema NOS (J43.9)
emphysema in newborn (P25.0)
surgical emphysema (subcutaneous) (T81.82)
traumatic subcutaneous emphysema (T79.7)

J98.3 Compensatory emphysema

DEF: Distention of all or part of the lung caused by disease processes or surgical intervention that decreased volume in another part of the lung, causing an overcompensation reaction. Compensatory emphysema occurs in association with pneumonias, pleural effusions, atelectasis, empyema, and pneumothorax.

J98.4 Other disorders of lung

- Calcification of lung
 - Cystic lung disease (acquired)
 - Lung disease NOS
 - Pulmolithiasis

Chapter 11. Diseases of the Digestive System (K00–K95)

EXCLUDES2 certain conditions originating in the perinatal period (P04–P96)
 certain infectious and parasitic diseases (A00–B99)
 complications of pregnancy, childbirth and the puerperium (O00–O9A)
 congenital malformations, deformations and chromosomal abnormalities (Q00–Q99)
 endocrine, nutritional and metabolic diseases (E00–E88)
 injury, poisoning and certain other consequences of external causes (S00–T88)
 neoplasms (C00–D49)
 symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00–R94)

This chapter contains the following blocks:

- K00–K14 Diseases of oral cavity and salivary glands
- K20–K31 Diseases of esophagus, stomach and duodenum
- K35–K38 Diseases of appendix
- K40–K46 Hernia
- K50–K52 Noninfective enteritis and colitis
- K55–K64 Other diseases of intestines
- K65–K68 Diseases of peritoneum and retroperitoneum
- K70–K77 Diseases of liver
- K80–K87 Disorders of gallbladder, biliary tract and pancreas
- K90–K95 Other diseases of the digestive system

Diseases of oral cavity and salivary glands (K00–K14)**✓41 K00 Disorders of tooth development and eruption**

EXCLUDES embedded and impacted teeth (K01.-)

K00.0 Anodontia

- Hypodontia
- Oligodontia

EXCLUDES1 acquired absence of teeth (K08.1-)

DEF: Partial or complete absence of teeth due to a congenital defect involving the tooth bud.

K00.1 Supernumerary teeth

- Distomolar
- Fourth molar
- Mesiodens
- Paramolar
- Supplementary teeth

EXCLUDES1 supernumerary roots (K00.2)

K00.2 Abnormalities of size and form of teeth

- Concrescence of teeth
- Fusion of teeth
- Gemination of teeth
- Dens evaginatus
- Dens in dente
- Dens invaginatus
- Enamel pearls
- Macrodonia
- Microdonia
- Peg-shaped [conical] teeth
- Supernumerary roots
- Taurodontism
- Tuberculum paramolare

EXCLUDES1 abnormalities of teeth due to congenital syphilis (A50.5)

tuberculum Carabelli, which is regarded as a normal variation and should not be coded

K00.3 Mottled teeth

- Dental fluorosis
- Mottling of enamel
- Nonfluoride enamel opacities

EXCLUDES2 deposits [accretions] on teeth (K03.6)

K00.4 Disturbances in tooth formation

- Aplasia and hypoplasia of cementum
- Dilaceration of tooth
- Enamel hypoplasia (neonatal) (postnatal) (prenatal)
- Regional odontodysplasia
- Turner's tooth

EXCLUDES1 Hutchinson's teeth and mulberry molars in congenital syphilis (A50.5)

EXCLUDES2 mottled teeth (K00.3)

K00.5 Hereditary disturbances in tooth structure, not elsewhere classified

- Amelogenesis imperfecta
- Dentinogenesis imperfecta
- Odontogenesis imperfecta
- Dentinal dysplasia
- Shell teeth

K00.6 Disturbances in tooth eruption

- Dentia praecox
- Natal tooth
- Neonatal tooth
- Premature eruption of tooth
- Premature shedding of primary [deciduous] tooth
- Prenatal teeth
- Retained [persistent] primary tooth

EXCLUDES2 embedded and impacted teeth (K01.-)

K00.7 Teething syndrome**K00.8 Other disorders of tooth development**

- Color changes during tooth formation

K01.0 Embedded teeth**K01.1 Impacted teeth****✓41 K02 Dental caries**

- INCLUDES**
- caries of dentine
 - dental cavities
 - early childhood caries
 - pre-eruptive caries
 - recurrent caries (dentino enamel junction) (enamel) (to the pulp)
 - tooth decay

DEF: Localized section of tooth decay that begins on the tooth surface with destruction of the calcified enamel, allowing bacterial destruction to continue and form cavities and may extend to the dentin and pulp.

Tooth Anatomy**K02.3 Arrested dental caries**

Arrested coronal and root caries

✓51 K02.5 Dental caries on pit and fissure surface

Dental caries on chewing surface of tooth

dental caries (K02.-)
teeth-grinding NOS (F45.8)
- K03.0 Excessive attrition of teeth**
Approximal wear of teeth
Occlusal wear of teeth
DEF: Attrition: In dentistry, wearing away or erosion of tooth surface from abrasive food or grinding teeth.
- K03.1 Abrasion of teeth**
Dentifrice abrasion of teeth
Habitual abrasion of teeth
Occupational abrasion of teeth
Ritual abrasion of teeth
Traditional abrasion of teeth
Wedge defect NOS
- K03.2 Erosion of teeth**
Erosion of teeth due to diet
Erosion of teeth due to drugs and medicaments
Erosion of teeth due to persistent vomiting
Erosion of teeth NOS
Idiopathic erosion of teeth
Occupational erosion of teeth

Secondary or irregular dentine

- K04.4 Acute apical periodontitis of pulpal origin** CC
Acute apical periodontitis NOS
EXCLUDES 1 acute periodontitis (K05.2-)
DEF: Severe inflammation of the area surrounding the tip of a tooth's root that is often secondary to infection or trauma.
- K04.5 Chronic apical periodontitis**
Apical or periapical granuloma
Apical periodontitis NOS
EXCLUDES 1 chronic periodontitis (K05.3-)
- K04.6 Periapical abscess with sinus** SW
Dental abscess with sinus
Dentoalveolar abscess with sinus
- K04.7 Periapical abscess without sinus**
Dental abscess without sinus
Dentoalveolar abscess without sinus
- K04.8 Radicular cyst**
Apical (periodontal) cyst
Periapical cyst
Residual radicular cyst
EXCLUDES 2 lateral periodontal cyst (K09.0)
DEF: Most common odontogenic cyst in tissue around the tooth apex due to chronic inflammation of dental pulp.
- ✓ 5th K04.9 Other and unspecified diseases of pulp and periapical tissues**
- K04.90 Unspecified diseases of pulp and periapical tissues**

Chapter 12. Diseases of the Skin and Subcutaneous Tissue (L00–L99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Pressure ulcer stage codes

1) Pressure ulcer stages

Codes in category L89, Pressure ulcer, identify the site and stage of the pressure ulcer.

The ICD-10-CM classifies pressure ulcer stages based on severity, which is designated by stages 1-4, deep tissue pressure injury, unspecified stage, and unstageable.

Assign as many codes from category L89 as needed to identify all the pressure ulcers the patient has, if applicable.

See Section I.B.14 for pressure ulcer stage documentation by clinicians other than patient's provider

Nursing notes: Dressings changed daily on stage 4 ulcer on heel and stage 2 ulcer on elbow

Discharge summary: Pressure ulcers on right heel and left elbow

L89.614 Pressure ulcer of right heel, stage 4

L89.022 Pressure ulcer of left elbow, stage 2

Explanation: Right heel and left elbow pressure ulcers were documented by the patient's provider in the discharge summary. Although the stage of these ulcers was not included in the provider's diagnostic statement, it is appropriate to code the stage from documentation from other clinicians involved in the patient's care, such as the nurse's notes, according to section I.B.14. Combination codes from category L89 Pressure ulcer, identify the site of the pressure ulcer as well as the stage. Assign as many codes from category L89 as needed to identify all the pressure ulcers the patient has.

2) Unstageable pressure ulcers

Assignment of the code for unstageable pressure ulcer (L89.–0) should be based on the clinical documentation. These codes are used for pressure ulcers whose stage cannot be clinically determined (e.g., the ulcer is covered by eschar or has been treated with a skin or muscle graft). This code should not be confused with the codes for unspecified stage (L89.–9). When there is no documentation regarding the stage of the pressure ulcer, assign the appropriate code for unspecified stage (L89.–9).

Pressure ulcer of the right lower back documented as unstageable due to the presence of thick eschar covering the ulcer

L89.130 Pressure ulcer of right lower back, unstageable

Explanation: Codes for unstageable pressure ulcers are assigned when the stage cannot be clinically determined (e.g., the ulcer is covered by eschar or has been treated with a skin or muscle graft).

3) Documented pressure ulcer stage

Assignment of the pressure ulcer stage code should be guided by clinical documentation of the stage or documentation of the terms found in the Alphabetic Index. For clinical terms describing the stage that are not found in the Alphabetic Index, and there is no documentation of the stage, the provider should be queried.

Left heel pressure ulcer with partial thickness skin loss involving the dermis

L89.622 Pressure ulcer of left heel, stage 2

Explanation: Code assignment for the pressure ulcer stage should be guided by either the clinical documentation of the stage or the documentation of terms found in the Alphabetic Index. The clinical documentation describing the left heel pressure ulcer "partial thickness skin loss involving the dermis" matches the ICD-10-CM index parenthetical description for stage 2 "(abrasion, blister, partial thickness skin loss involving epidermis and/or dermis)."

4) Patients admitted with pressure ulcers documented as healed

No code is assigned if the documentation states that the pressure ulcer is completely healed at the time of admission.

5) Pressure ulcers documented as healing

Pressure ulcers described as healing should be assigned the appropriate pressure ulcer stage code based on the documentation in the medical record. If the documentation does not provide information about the stage of the healing pressure ulcer, assign the appropriate code for unspecified stage.

If the documentation is unclear as to whether the patient has a current (new) pressure ulcer or if the patient is being treated for a healing pressure ulcer, query the provider.

For ulcers that were present on admission but healed at the time of discharge, assign the code for the site and stage of the pressure ulcer at the time of admission.

H & P noted healing stage 2 sacral pressure ulcer. Resolved at time of discharge summary.

L89.152 Pressure ulcer of sacral region, stage 2

Explanation: Although completely healed upon discharge, the pressure ulcer required observation and/or treatment and should be coded based on the site and stage upon admission.

6) Patient admitted with pressure ulcer evolving into another stage during the admission

If a patient is admitted to an inpatient hospital with a pressure ulcer at one stage and it progresses to a higher stage, two separate codes should be assigned: one code for the site and stage of the ulcer on admission and a second code for the same ulcer site and the highest stage reported during the stay.

Stage 3 right hip pressure ulcer worsened during admission to a stage 4

L89.213 Pressure ulcer of right hip, stage 3

L89.214 Pressure ulcer of right hip, stage 4

Explanation: A pressure ulcer that progresses from a lower stage to a higher stage is assigned two codes, one for the documented stage upon admission and one for the documented stage at discharge.

7) Pressure-induced deep tissue damage

For pressure-induced deep tissue damage or deep tissue pressure injury, assign only the appropriate code for pressure-induced deep tissue damage (L89.–6).

b. Non-pressure chronic ulcers

1) Patients admitted with non-pressure ulcers documented as healed

No code is assigned if the documentation states that the non-pressure ulcer is completely healed at the time of admission.

2) Non-pressure ulcers documented as healing

Non-pressure ulcers described as healing should be assigned the appropriate non-pressure ulcer code based on the documentation in the medical record. If the documentation does not provide information about the severity of the healing non-pressure ulcer, assign the appropriate code for unspecified severity.

If the documentation is unclear as to whether the patient has a current (new) non-pressure ulcer or if the patient is being treated for a healing non-pressure ulcer, query the provider.

For ulcers that were present on admission but healed at the time of discharge, assign the code for the site and severity of the non-pressure ulcer at the time of admission.

Admission diagnosis: Chronic ulcer, fat layer exposed, on left ankle

Discharge diagnosis: Resolution of ulcer on the left ankle

L97.322 Non-pressure chronic ulcer of left ankle with fat layer exposed

Explanation: Although the ulcer was documented as resolved (healed) at discharge, a code representing the site and severity of the ulcer upon admission should be appended.

3) Patient admitted with non-pressure ulcer that progresses to another severity level during the admission

If a patient is admitted to an inpatient hospital with a non-pressure ulcer at one severity level and it progresses to a higher severity level, two separate codes should be assigned: one code for the site and severity level of the ulcer on admission and a second code for the same ulcer site and the highest severity level reported during the stay.

See Section I.B.14 for pressure ulcer stage documentation by clinicians other than patient's provider

Chapter 12. Diseases of the Skin and Subcutaneous Tissue (L00-L99)

EXCLUDES 2 certain conditions originating in the perinatal period (P04-P96)
 certain infectious and parasitic diseases (A00-B99)
 complications of pregnancy, childbirth and the puerperium (O00-O9A)
 congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)
 endocrine, nutritional and metabolic diseases (E00-E88)
 lipomelanotic reticulosis (I89.8)
 neoplasms (C00-D49)
 symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)
 systemic connective tissue disorders (M30-M36)
 viral warts (B07.-)

This chapter contains the following blocks:

- L00-L08 Infections of the skin and subcutaneous tissue
- L10-L14 Bullous disorders
- L20-L30 Dermatitis and eczema
- L40-L45 Papulosquamous disorders
- L49-L54 Urticaria and erythema
- L55-L59 Radiation-related disorders of the skin and subcutaneous tissue
- L60-L75 Disorders of skin appendages
- L76 Intraoperative and postprocedural complications of skin and subcutaneous tissue
- L80-L99 Other disorders of the skin and subcutaneous tissue

Infections of the skin and subcutaneous tissue (L00-L08)

L00 Staphylococcal scalded skin syndrome

Ritter's disease

Use additional code to identify percentage of skin exfoliation (L49.-)

EXCLUDES 1 *bullous impetigo* (L01.03)
pemphigus neonatorum (L01.03)
toxic epidermal necrolysis [Lyell] (L51.2)

DEF: Infectious skin disease of children younger than 5 years marked by eruptions ranging from a few localized blisters to widespread, easily ruptured, fine vesicles and bullae affecting almost the entire body. It results in exfoliation of large planes of skin and leaves raw areas.

✓4th L01 Impetigo

EXCLUDES 1 *impetigo herpetiformis* (L40.1)

DEF: Acute, superficial, highly contagious skin infection commonly occurring in children. Skin lesions usually appear on the face and consist of vesicles and bullae that burst and form yellow crusts.

✓5th L01.0 Impetigo

Impetigo contagiosa

Impetigo vulgaris

L01.00 Impetigo, unspecified
 Impetigo NOS

L01.01 Non-bullous impetigo

Impetigo follicularis

Perifolliculitis NOS

Superficial pustular perifolliculitis

DEF: Superficial inflammation of the hair follicles most commonly caused by staph aureus that manifests as rounded, sphere-shaped, pustular eruptions in the areas of the scalp, beard, underarms, extremities, and buttocks.

L01.03 Bullous impetigo

Impetigo neonatorum

Pemphigus neonatorum

L01.09 Other impetigo

Ulcerative impetigo

L01.1 Impetiginization of other dermatoses

✓4th L02 Cutaneous abscess, furuncle and carbuncle

Use additional code to identify organism (B95-B96)

EXCLUDES 2 *abscess of anus and rectal regions* (K61.-)

abscess of female genital organs (external) (N76.4)

abscess of male genital organs (external) (N48.2, N49.-)

DEF: Carbuncle: Infection of the skin that arises from a collection of interconnected infected boils or furuncles, usually from hair follicles infected by *Staphylococcus*. This condition can produce pus and form drainage cavities.

DEF: Furuncle: Inflamed, painful abscess, cyst, or nodule on the skin caused by bacteria, often *Staphylococcus*, entering along the hair follicle.

✓5th L02.0 Cutaneous abscess, furuncle and carbuncle of face

Chapter 13. Diseases of the Musculoskeletal System and Connective Tissue (M00–M99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Site and laterality

Most of the codes within Chapter 13 have site and laterality designations. The site represents the bone, joint or the muscle involved. For some conditions where more than one bone, joint or muscle is usually involved, such as osteoarthritis, there is a "multiple sites" code available. For categories where no multiple site code is provided and more than one bone, joint or muscle is involved, multiple codes should be used to indicate the different sites involved.

Rheumatoid arthritis of multiple sites without rheumatoid factor

M06.09 Rheumatoid arthritis without rheumatoid factor, multiple sites

Explanation: For some conditions where more than one bone, joint or muscle is usually involved, such as rheumatoid arthritis, there is a "multiple sites" code available.

Osteomyelitis of the fourth thoracic and second lumbar vertebrae

M46.24 Osteomyelitis of vertebra, thoracic region

M46.26 Osteomyelitis of vertebra, lumbar region

Explanation: For categories without a multiple site code and more than one bone, joint, or muscle is involved, multiple codes should be used to indicate the different sites involved.

1) Bone versus joint

For certain conditions, the bone may be affected at the upper or lower end, (e.g., avascular necrosis of bone, M87, Osteoporosis, M80, M81). Though the portion of the bone affected may be at the joint, the site designation will be the bone, not the joint.

Idiopathic avascular necrosis of the femoral head of the left hip joint

M87.052 Idiopathic aseptic necrosis of left femur

Explanation: For certain conditions such as avascular necrosis, the bone may be affected at the joint, but the site designation is the bone, not the joint.

b. Acute traumatic versus chronic or recurrent musculoskeletal conditions

Many musculoskeletal conditions are a result of previous injury or trauma to a site, or are recurrent conditions. Bone, joint or muscle conditions that are the result of a healed injury are usually found in chapter 13. Recurrent bone, joint or muscle conditions are also usually found in chapter 13. Any current, acute injury should be coded to the appropriate injury code from chapter 19. Chronic or recurrent conditions should generally be coded with a code from chapter 13. If it is difficult to determine from the documentation in the record which code is best to describe a condition, query the provider.

Acute traumatic bucket-handle tear of right medial meniscus

S83.211A Bucket-handle tear of medial meniscus, current injury, right knee, initial encounter

Explanation: Any current, acute injury is not coded in chapter 13. It should instead be coded to the appropriate injury code from chapter 19.

Old bucket-handle tear of right medial meniscus

M23.203 Derangement of unspecified medial meniscus due to old tear or injury, right knee

Explanation: Chronic or recurrent conditions should generally be coded with a code from chapter 13.

c. Coding of pathological fractures

7th character A is for use as long as the patient is receiving active treatment for the fracture. Examples of active treatment are: surgical treatment, emergency department encounter, evaluation and continuing treatment by the same or a different physician. While the patient may be seen by a new or different provider over the course of treatment for a pathological fracture,

assignment of the 7th character is based on whether the patient is undergoing active treatment and not whether the provider is seeing the patient for the first time.

Patient admitted for repair of pathologic fracture of left foot, unknown cause. The surgery will be performed by his orthopedic specialist who he has been seeing for this fracture for the past month.

M84.475A Pathological fracture, left foot, initial encounter for fracture

Explanation: Seventh character A is for use as long as the patient is receiving active treatment for a pathologic fracture. Examples of active treatment are surgical treatment, emergency department encounter, evaluation, and continuing treatment by the same or a different physician.

The seventh character is based on whether the patient is undergoing active treatment such as surgery, and not whether the provider is seeing the patient for the first time.

7th character D is to be used for encounters after the patient has completed active treatment for the fracture and is receiving routine care for the fracture during the healing or recovery phase. The other 7th characters, listed under each subcategory in the Tabular List, are to be used for subsequent encounters for treatment of problems associated with the healing, such as malunions, nonunions, and sequelae.

Care for complications of surgical treatment for fracture repairs during the healing or recovery phase should be coded with the appropriate complication codes.

See Section I.C.19. Coding of traumatic fractures.

d. Osteoporosis

Osteoporosis is a systemic condition, meaning that all bones of the musculoskeletal system are affected. Therefore, site is not a component of the codes under category M81, Osteoporosis without current pathological fracture. The site codes under category M80, Osteoporosis with current pathological fracture, identify the site of the fracture, not the osteoporosis.

1) Osteoporosis without pathological fracture

Category M81, Osteoporosis without current pathological fracture, is for use for patients with osteoporosis who do not currently have a pathologic fracture due to the osteoporosis, even if they have had a fracture in the past. For patients with a history of osteoporosis fractures, status code Z87.310, Personal history of (healed) osteoporosis fracture, should follow the code from M81.

Age-related osteoporosis with healed osteoporotic fracture of the lumbar vertebra

M81.0 Age-related osteoporosis without current pathological fracture

Z87.310 Personal history of (healed) osteoporosis fracture

Explanation: Category M81 is used for patients with osteoporosis who do not currently have a pathologic fracture due to the osteoporosis. To report a previous (healed) fracture, status code Z87.310 Personal history of (healed) osteoporosis fracture, should follow the code from M81.

2) Osteoporosis with current pathological fracture

Category M80, Osteoporosis with current pathological fracture, is for patients who have a current pathologic fracture at the time of an encounter. The codes under M80 identify the site of the fracture. A code from category M80, not a traumatic fracture code, should be used for any patient with known osteoporosis who suffers a fracture, even if the patient had a minor fall or trauma, if that fall or trauma would not usually break a normal, healthy bone.

Disuse osteoporosis with current fracture of right shoulder sustained lifting a grocery bag, initial encounter

M80.811A Other osteoporosis with current pathological fracture, right shoulder, initial encounter for fracture

Explanation: A code from category M80, not a traumatic fracture code, should be used for any patient with known osteoporosis who suffers a fracture, even if the patient had a minor fall or trauma, if that fall or trauma would not usually break a normal, healthy bone.

Muscle/Tendon Table

ICD-10-CM categorizes certain muscles and tendons in the upper and lower extremities by their action (e.g., extension, flexion), their anatomical location (e.g., posterior, anterior), and/or whether they are intrinsic or extrinsic to a certain anatomical area. The Muscle/Tendon Table is provided at the beginning of chapters 13 and 19 as a resource to help users when code selection depends on one or more of these characteristics. Please note that this table is not all-inclusive, and proper code assignment should be based on the provider's documentation.

Chapter 13. Diseases of the Musculoskeletal System and Connective Tissue (M00-M99)

NOTE Use an external cause code following the code for the musculoskeletal condition, if applicable, to identify the cause of the musculoskeletal condition

EXCLUDES2 *arthropathic psoriasis (L40.5-)*
certain conditions originating in the perinatal period (P04-P96)
certain infectious and parasitic diseases (A00-B99)
compartment syndrome (traumatic) (T79.A-)
complications of pregnancy, childbirth and the puerperium (O00-O9A)
congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)
endocrine, nutritional and metabolic diseases (E00-E88)
injury, poisoning and certain other consequences of external causes (S00-T88)
neoplasms (C00-D49)
symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)

This chapter contains the following blocks:

M00-M02 Infectious arthropathies
 M04 Autoinflammatory syndromes
 M05-M14 Inflammatory polyarthropathies
 M15-M19 Osteoarthritis
 M20-M25 Other joint disorders
 M26-M27 Dentofacial anomalies [including malocclusion] and other disorders of jaw
 M30-M36 Systemic connective tissue disorders
 M40-M43 Deforming dorsopathies
 M45-M49 Spondylopathies
 M50-M54 Other dorsopathies
 M60-M63 Disorders of muscles
 M65-M67 Disorders of synovium and tendon
 M70-M79 Other soft tissue disorders
 M80-M85 Disorders of bone density and structure
 M86-M90 Other osteopathies
 M91-M94 Chondropathies
 M95 Other disorders of the musculoskeletal system and connective tissue
 M96 Intraoperative and postprocedural complications and disorders of musculoskeletal system, not elsewhere classified
 M97 Periprosthetic fracture around internal prosthetic joint
 M99 Biomechanical lesions, not elsewhere classified

ARTHROPATHIES (M00-M25)

INCLUDES disorders affecting predominantly peripheral (limb) joints

Infectious arthropathies (M00-M02)

NOTE This block comprises arthropathies due to microbiological agents. Distinction is made between the following types of etiological relationship:

- direct infection of joint, where organisms invade synovial tissue and microbial antigen is present in the joint;
- indirect infection, which may be of two types: a reactive arthropathy, where microbial infection of the body is established but neither organisms nor antigens can be identified in the joint, and a postinfective arthropathy, where microbial antigen is present but recovery of an organism is inconstant and evidence of local multiplication is lacking.

Chapter 14. Diseases of Genitourinary System (N00–N99)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. Chronic kidney disease

1) Stages of chronic kidney disease (CKD)

The ICD-10-CM classifies CKD based on severity. The severity of CKD is designated by stages 1-5. Stage 2, code N18.2, equates to mild CKD; stage 3, codes N18.30–N18.32, equate to moderate CKD; and stage 4, code N18.4, equates to severe CKD. Code N18.6, End stage renal disease (ESRD), is assigned when the provider has documented end-stage renal disease (ESRD).

If both a stage of CKD and ESRD are documented, assign code N18.6 only.

Stage 5 chronic kidney disease with ESRD requiring chronic dialysis

N18.6 End stage renal disease

Z99.2 Dependence on renal dialysis

Explanation: The diagnostic statement indicates the patient has chronic kidney disease, documented both as stage 5 and as ESRD requiring chronic dialysis. Code N18.6 End stage renal disease (ESRD), is assigned when the provider has documented end-stage-renal disease (ESRD). If both a stage of CKD and ESRD are documented, assign code N18.6 only.

2) Chronic kidney disease and kidney transplant status

Patients who have undergone kidney transplant may still have some form of chronic kidney disease (CKD) because the kidney transplant may not fully restore kidney function. Therefore, the presence of CKD alone does not constitute a transplant complication. Assign the appropriate N18 code for the patient's stage of CKD and code Z94.0, Kidney transplant status. If a transplant complication such as failure or rejection or other transplant complication is documented, see section I.C.19.g for information on coding complications of a kidney transplant. If the documentation is unclear as to whether the patient has a complication of the transplant, query the provider.

Patient with residual chronic kidney disease stage 1 after kidney transplant

N18.1 Chronic kidney disease, stage 1

Z94.0 Kidney transplant status

Explanation: Patients who have undergone kidney transplant may still have some form of chronic kidney disease (CKD) because the kidney transplant may not fully restore kidney function. The presence of CKD alone does not constitute a transplant complication. Assign the appropriate N18 code for the patient's stage of CKD and code Z94.0 Kidney transplant status.

3) Chronic kidney disease with other conditions

Patients with CKD may also suffer from other serious conditions, most commonly diabetes mellitus and hypertension. The sequencing of the CKD code in relationship to codes for other contributing conditions is based on the conventions in the Tabular List.

See I.C.9. Hypertensive chronic kidney disease.

See I.C.19. Chronic kidney disease and kidney transplant complications.

Type 1 diabetic chronic kidney disease, stage 2

E10.22 Type 1 diabetes mellitus with diabetic chronic kidney disease

N18.2 Chronic kidney disease, stage 2 (mild)

Explanation: Patients with CKD may also suffer from other serious conditions such as diabetes mellitus. The sequencing of the CKD code in relationship to codes for other contributing conditions is based on the conventions in the Tabular List. Diabetic CKD code E10.22 includes an instructional note to "Use additional code to identify stage of chronic kidney disease (N18.1–N18.6)," thus providing sequencing direction.

Chapter 14. Diseases of the Genitourinary System (N00–N99)

EXCLUDES 2 certain conditions originating in the perinatal period (P04–P96)
certain infectious and parasitic diseases (A00–B99)
complications of pregnancy, childbirth and the puerperium (O00–O9A)
congenital malformations, deformations and chromosomal abnormalities (Q00–Q99)
endocrine, nutritional and metabolic diseases (E00–E88)
injury, poisoning and certain other consequences of external causes (S00–T88)
neoplasms (C00–D49)
symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00–R94)

This chapter contains the following blocks:

- N00–N08 Glomerular diseases
- N10–N16 Renal tubulo-interstitial diseases
- N17–N19 Acute kidney failure and chronic kidney disease
- N20–N23 Urolithiasis
- N25–N29 Other disorders of kidney and ureter
- N30–N39 Other diseases of the urinary system
- N40–N53 Diseases of male genital organs
- N60–N65 Disorders of breast
- N70–N77 Inflammatory diseases of female pelvic organs
- N80–N98 Noninflammatory disorders of female genital tract
- N99 Intraoperative and postprocedural complications and disorders of genitourinary system, not elsewhere classified

Glomerular diseases (N00–N08)

Code also any associated kidney failure (N17–N19).

EXCLUDES 1 hypertensive chronic kidney disease (I12.-)

DEF: Glomeruli: Clusters of microscopic blood vessels located within the kidneys containing small pores through which waste products are filtered from the blood and urine is formed.

DEF: Glomerulonephritis: Disease of the kidney with diffuse inflammation of the capillary loops of the glomeruli.

Chapter 15. Pregnancy, Childbirth and the Puerperium (O00–O9A)

Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

a. General rules for obstetric cases

1) Codes from Chapter 15 and sequencing priority

Obstetric cases require codes from chapter 15, codes in the range O00–O9A, Pregnancy, Childbirth, and the Puerperium. Chapter 15 codes have sequencing priority over codes from other chapters. Additional codes from other chapters may be used in conjunction with chapter 15 codes to further specify conditions. Should the provider document that the pregnancy is incidental to the encounter, then code Z33.1, Pregnant state, incidental, should be used in place of any chapter 15 codes. It is the provider's responsibility to state that the condition being treated is not affecting the pregnancy.

Pregnant patient at 25 weeks' gestation admitted for bladder abscess

O23.12 Infections of bladder in pregnancy, second trimester

N30.80 Other cystitis without hematuria

Z3A.25 25 weeks gestation of pregnancy

Explanation: The documentation does not indicate that the pregnancy is incidental or in any way unaffected by the bladder abscess; therefore, an obstetrics code should be sequenced first. An additional code was provided to identify the specific bladder condition as this information is not called out specifically in the obstetrics code.

2) Chapter 15 codes used only on the maternal record

Chapter 15 codes are to be used only on the maternal record, never on the record of the newborn.

3) Final character for trimester

The majority of codes in Chapter 15 have a final character indicating the trimester of pregnancy. The timeframes for the trimesters are indicated at the beginning of the chapter. If trimester is not a component of a code, it is because the condition always occurs in a specific trimester, or the concept of trimester of pregnancy is not applicable. Certain codes have characters for only certain trimesters because the condition does not occur in all trimesters, but it may occur in more than just one.

Assignment of the final character for trimester should be based on the provider's documentation of the trimester (or number of weeks) for the current admission/encounter. This applies to the assignment of trimester for pre-existing conditions as well as those that develop during or are due to the pregnancy. The provider's documentation of the number of weeks may be used to assign the appropriate code identifying the trimester.

Whenever delivery occurs during the current admission, and there is an "in childbirth" option for the obstetric complication being coded, the "in childbirth" code should be assigned.

Pregnant patient at 21 weeks' gestation admitted with excessive vomiting

O21.2 Late vomiting of pregnancy

Z3A.21 21 weeks gestation of pregnancy

Explanation: Category O21 classifies vomiting in pregnancy. Although code selection is based on whether the vomiting is before or after 20 completed weeks, these codes are not further classified by trimester. If vomiting only in the second trimester was documented, the provider should be queried for the specific week of gestation, as this will affect code selection.

4) Selection of trimester for inpatient admissions that encompass more than one trimester

In instances when a patient is admitted to a hospital for complications of pregnancy during one trimester and remains in the hospital into a subsequent trimester, the trimester character for the antepartum complication code should be assigned on the basis of the trimester when the complication developed, not the trimester of the discharge. If the condition developed prior to the current admission/encounter or represents a pre-existing condition, the trimester character for the trimester at the time of the admission/encounter should be assigned.

Patient admitted at 27 6/7 weeks' gestation for hemorrhaging from partial placenta previa; three days after admission at 28 1/7 weeks' gestation, she developed gestational hypertension

O44.32 Partial placenta previa with hemorrhage, second trimester

O13.3 Gestational [pregnancy-induced] hypertension without significant proteinuria, third trimester

Z3A.27 27 weeks gestation of pregnancy

Explanation: The patient presented with hemorrhaging from partial placenta previa while still in her 27th week, which falls within the second trimester. The gestational hypertension did not occur until three days after admission, putting the patient in her 28th week of pregnancy or what is considered to be the third trimester. The weeks of gestation captured by a code from category Z3A should represent only the gestational weeks upon admission.

5) Unspecified trimester

Each category that includes codes for trimester has a code for "unspecified trimester." The "unspecified trimester" code should rarely be used, such as when the documentation in the record is insufficient to determine the trimester and it is not possible to obtain clarification.

6) 7th character for fetus identification

Where applicable, a 7th character is to be assigned for certain categories (O31, O32, O33.3 – O33.6, O35, O36, O40, O41, O60.1, O60.2, O64, and O69) to identify the fetus for which the complication code applies.

Assign 7th character "0":

- For single gestations
- When the documentation in the record is insufficient to determine the fetus affected and it is not possible to obtain clarification.
- When it is not possible to clinically determine which fetus is affected.

Maternal patient with twin gestations is seen after ultrasound identifies fetus B to be in breech presentation

O32.1XX2 Maternal care for breech presentation, fetus 2

Explanation: The documentation indicates that although there are two fetuses, only one fetus is determined to be in breech presentation. Whether fetus 2 or fetus B is used, the coder can assign the seventh character of 2 to identify the second fetus as the one in breech.

b. Selection of OB principal or first-listed diagnosis

1) Routine outpatient prenatal visits

For routine outpatient prenatal visits when no complications are present, a code from category Z34, Encounter for supervision of normal pregnancy, should be used as the first-listed diagnosis. These codes should not be used in conjunction with chapter 15 codes.

2) Supervision of high-risk pregnancy

Codes from category O09, Supervision of high-risk pregnancy, are intended for use only during the prenatal period. For complications during the labor or delivery episode as a result of a high-risk pregnancy, assign the applicable complication codes from Chapter 15. If there are no complications during the labor or delivery episode, assign code O80, Encounter for full-term uncomplicated delivery.

For routine prenatal outpatient visits for patients with high-risk pregnancies, a code from category O09, Supervision of high-risk pregnancy, should be used as the first-listed diagnosis. Secondary chapter 15 codes may be used in conjunction with these codes if appropriate.

36-year-old with history of preterm labor admitted in labor with second child at 39 weeks' gestation, delivered healthy baby without complications

O80 Encounter for full-term uncomplicated delivery

Z3A.39 39 weeks gestation of pregnancy

Z37.0 Single live birth

Explanation: Although this patient is over 35 and having her second child (elderly multigravida) and has a history of preterm labor with her first child, no codes from category O09.- should be appended. In the absence of any other complications noted during the encounter, code O80 is the most appropriate code to describe the principal diagnosis.

3) Episodes when no delivery occurs

In episodes when no delivery occurs, the principal diagnosis should correspond to the principal complication of the pregnancy which necessitated the encounter. Should more than one complication exist, all of which are treated or monitored, any of the complication codes may be sequenced first.

4) When a delivery occurs

When an obstetric patient is admitted and delivers during that admission, the condition that prompted the admission should be sequenced as the principal diagnosis. If multiple conditions prompted the admission, sequence the one most related to the delivery as the principal diagnosis. A code for any complication of the delivery should be assigned as an additional diagnosis. In cases of cesarean delivery, if the patient was admitted with a condition that resulted in the performance of a cesarean procedure, that condition should be selected as the principal diagnosis. If the reason for the admission was unrelated to the condition resulting in the cesarean delivery, the condition related to the reason for the admission should be selected as the principal diagnosis.

Maternal patient with diet-controlled gestational diabetes was admitted at 38 weeks' gestation in obstructed labor due to footling presentation; cesarean performed for the malpresentation

O64.8XX0 **Obstructed labor due to other malposition and malpresentation, not applicable or unspecified**

O24.420 **Gestational diabetes mellitus in childbirth, diet controlled**

Z3A.38 **38 weeks gestation of pregnancy**

Z37.0 **Single live birth**

Explanation: The obstructed labor necessitated the cesarean procedure.

At 39 weeks' gestation, a maternal patient presents with hemorrhage with coagulation defect; the next day the patient goes into labor and eventually delivers via cesarean section due to arrested active phase of labor

O46.003 **Antepartum hemorrhage with coagulation defect, unspecified, third trimester**

O62.1 **Secondary uterine inertia**

Z3A.39 **39 weeks gestation of pregnancy**

Z37.0 **Single live birth**

Explanation: The patient was admitted because of the antepartum hemorrhage with coagulation defect. The arrested active phase, although the reason for the cesarean delivery, did not develop until later into the stay.

5) Outcome of delivery

A code from category Z37, Outcome of delivery, should be included on every maternal record when a delivery has occurred. These codes are not to be used on subsequent records or on the newborn record.

c. Pre-existing conditions versus conditions due to the pregnancy

Certain categories in Chapter 15 distinguish between conditions of the mother that existed prior to pregnancy (pre-existing) and those that are a direct result of pregnancy. When assigning codes from Chapter 15, it is important to assess if a condition was pre-existing prior to pregnancy or developed during or due to the pregnancy in order to assign the correct code.

Categories that do not distinguish between pre-existing and pregnancy-related conditions may be used for either. It is acceptable to use codes specifically for the puerperium with codes complicating pregnancy and childbirth if a condition arises postpartum during the delivery encounter.

d. Pre-existing hypertension in pregnancy

Category O10, Pre-existing hypertension complicating pregnancy, childbirth and the puerperium, includes codes for hypertensive heart and hypertensive chronic kidney disease. When assigning one of the O10 codes that includes hypertensive heart disease or hypertensive chronic kidney disease, it is necessary to add a secondary code from the appropriate hypertension category to specify the type of heart failure or chronic kidney disease.

See Section I.C.9. Hypertension.

e. Fetal conditions affecting the management of the mother**1) Codes from categories O35 and O36**

Codes from categories O35, Maternal care for known or suspected fetal abnormality and damage, and O36, Maternal care for other fetal problems, are assigned only when the fetal condition is actually responsible for modifying the management of the mother, i.e., by requiring diagnostic studies, additional observation, special care, or termination of pregnancy. The fact that the fetal condition exists does not justify assigning a code from this series to the mother's record.

A patient is seen in ED for spotting 15 weeks into her pregnancy; the doctors also suspect fetal hydrocephalus.

O26.852 **Spotting complicating pregnancy, second trimester**

Z3A.15 **15 weeks gestation of pregnancy**

Explanation: Whether the fetal hydrocephalus was suspected or confirmed, an additional code is not warranted for this condition as the documentation does not indicate that this fetal condition is in any way altering the management of the mother or complicating her pregnancy.

2) In utero surgery

In cases when surgery is performed on the fetus, a diagnosis code from category O35, Maternal care for known or suspected fetal abnormality and damage, should be assigned identifying the fetal condition. Assign the appropriate procedure code for the procedure performed.

No code from Chapter 16, the perinatal codes, should be used on the mother's record to identify fetal conditions. Surgery performed in utero on a fetus is still to be coded as an obstetric encounter.

f. HIV infection in pregnancy, childbirth and the puerperium

During pregnancy, childbirth or the puerperium, a patient admitted because of an HIV-related illness should receive a principal diagnosis from subcategory O98.7-, Human immunodeficiency [HIV] disease complicating pregnancy, childbirth and the puerperium, followed by the code(s) for the HIV-related illness(es).

Patients with asymptomatic HIV infection status admitted during pregnancy, childbirth, or the puerperium should receive codes of O98.7- and Z21, Asymptomatic human immunodeficiency virus [HIV] infection status.

A previously asymptomatic HIV patient who is 13 weeks pregnant is admitted with oral thrush.

O98.711 **Human immunodeficiency virus [HIV] disease complicating pregnancy, first trimester**

B20 **Human immunodeficiency virus [HIV] disease**

B37.0 **Candidal stomatitis**

Z3A.13 **13 weeks gestation of pregnancy**

Explanation: Because oral thrush is an HIV-related condition, this patient is now considered to have HIV disease. An obstetrics code indicating that HIV is complicating the pregnancy is coded first, followed by B20 for HIV disease as well as a code for the oral thrush.

g. Diabetes mellitus in pregnancy

Diabetes mellitus is a significant complicating factor in pregnancy. Pregnant women who are diabetic should be assigned a code from category O24, Diabetes mellitus in pregnancy, childbirth, and the puerperium, first, followed by the appropriate diabetes code(s) (E08-E13) from Chapter 4.

h. Long term use of insulin and oral hypoglycemics

See section I.C.4.a.3 for information on the long-term use of insulin and oral hypoglycemics.

i. Gestational (pregnancy induced) diabetes

Gestational (pregnancy induced) diabetes can occur during the second and third trimester of pregnancy in women who were not diabetic prior to pregnancy. Gestational diabetes can cause complications in the pregnancy similar to those of pre-existing diabetes mellitus. It also puts the woman at greater risk of developing diabetes after the pregnancy. Codes for gestational diabetes are in subcategory O24.4, Gestational diabetes mellitus. No other code from category O24, Diabetes mellitus in pregnancy, childbirth, and the puerperium, should be used with a code from O24.4.

The codes under subcategory O24.4 include diet controlled, insulin controlled, and controlled by oral hypoglycemic drugs. If a patient with gestational diabetes is treated with both diet and insulin, only the code for insulin-controlled is required. If a patient with gestational diabetes is treated with both diet and oral hypoglycemic medications, only the code for

"controlled by oral hypoglycemic drugs" is required. Code Z79.4, Long-term (current) use of insulin or code Z79.84, Long-term (current) use of oral hypoglycemic drugs, should not be assigned with codes from subcategory O24.4.

An abnormal glucose tolerance in pregnancy is assigned a code from subcategory O99.81, Abnormal glucose complicating pregnancy, childbirth, and the puerperium.

Patient at 39 weeks term pregnancy with gestational diabetes was admitted in labor and delivered a healthy newborn. Patient is on a diabetic diet with daily metformin.

O24.425 Gestational diabetes mellitus in childbirth, controlled by oral hypoglycemic drugs

Z3A.39 39 weeks gestation of pregnancy

Z37.0 Single live birth

Explanation: When the patient is admitted for delivery and the patient's gestational diabetes is controlled by both diet and oral hypoglycemic medications, only the combination code in subcategory O24.4-Gestational diabetes mellitus, is reported. No code is added for diet controlled diabetes, and no Z code for long-term use of oral hypoglycemics is reported with the O24.4 combination codes.

j. Sepsis and septic shock complicating abortion, pregnancy, childbirth and the puerperium

When assigning a chapter 15 code for sepsis complicating abortion, pregnancy, childbirth, and the puerperium, a code for the specific type of infection should be assigned as an additional diagnosis. If severe sepsis is present, a code from subcategory R65.2, Severe sepsis, and code(s) for associated organ dysfunction(s) should also be assigned as additional diagnoses.

Patient is seen several days after a miscarriage with sepsis; cultures return MSSA

O03.87 Sepsis following complete or unspecified spontaneous abortion

B95.61 Methicillin susceptible *Staphylococcus aureus* infection as the cause of diseases classified elsewhere

Explanation: The type of infection that caused this patient to become septic was methicillin susceptible *Staphylococcus aureus* (MSSA), which as a secondary code helps capture all aspects related to this patient's septic condition.

k. Puerperal sepsis

Code O85, Puerperal sepsis, should be assigned with a secondary code to identify the causal organism (e.g., for a bacterial infection, assign a code from category B95-B96, Bacterial infections in conditions classified elsewhere). A code from category A40, Streptococcal sepsis, or A41, Other sepsis, should not be used for puerperal sepsis. If applicable, use additional codes to identify severe sepsis (R65.2-) and any associated acute organ dysfunction.

Code O85 should not be assigned for sepsis following an obstetrical procedure (See Section I.C.1.d.5.b., Sepsis due to a postprocedural infection).

l. Alcohol, tobacco and drug use during pregnancy, childbirth and the puerperium

1) Alcohol use during pregnancy, childbirth and the puerperium

Codes under subcategory O99.31, Alcohol use complicating pregnancy, childbirth, and the puerperium, should be assigned for any pregnancy case when a mother uses alcohol during the pregnancy or postpartum. A secondary code from category F10, Alcohol related disorders, should also be assigned to identify manifestations of the alcohol use.

2) Tobacco use during pregnancy, childbirth and the puerperium

Codes under subcategory O99.33, Smoking (tobacco) complicating pregnancy, childbirth, and the puerperium, should be assigned for any pregnancy case when a mother uses any type of tobacco product during the pregnancy or postpartum. A secondary code from category F17, Nicotine dependence, should also be assigned to identify the type of nicotine dependence.

3) Drug use during pregnancy, childbirth and the puerperium

Codes under subcategory O99.32, Drug use complicating pregnancy, childbirth, and the puerperium, should be assigned for any pregnancy case when a mother uses drugs during the pregnancy or postpartum. This can involve illegal drugs, or inappropriate use or abuse of prescription drugs. Secondary code(s) from categories F11-F16 and F18-F19 should also be assigned to identify manifestations of the drug use.

m. Poisoning, toxic effects, adverse effects and underdosing in a pregnant patient

A code from subcategory O9A.2, Injury, poisoning and certain other consequences of external causes complicating pregnancy, childbirth, and the puerperium, should be sequenced first, followed by the appropriate injury, poisoning, toxic effect, adverse effect or underdosing code, and then the additional code(s) that specifies the condition caused by the poisoning, toxic effect, adverse effect or underdosing.

See Section I.C.19. Adverse effects, poisoning, underdosing and toxic effects.

Patient admitted with accidental carbon monoxide poisoning from a gas heating implement; the patient is 18 weeks' pregnant

O9A.212 Injury, poisoning and certain other consequences of external causes complicating pregnancy, second trimester

T58.11XA Toxic effect of carbon monoxide from utility gas, accidental (unintentional), initial encounter

Z3A.18 18 weeks gestation of pregnancy

Explanation: Although the carbon monoxide poisoning is the reason the patient was admitted, a code from the obstetrics chapter must be sequenced first. Chapter 15 codes have sequencing priority over codes from other chapters.

n. Normal delivery, code O80

1) Encounter for full term uncomplicated delivery

Code O80 should be assigned when a woman is admitted for a full-term normal delivery and delivers a single, healthy infant without any complications antepartum, during the delivery, or postpartum during the delivery episode. Code O80 is always a principal diagnosis. It is not to be used if any other code from chapter 15 is needed to describe a current complication of the antenatal, delivery, or postnatal period. Additional codes from other chapters may be used with code O80 if they are not related to or are in any way complicating the pregnancy.

2) Uncomplicated delivery with resolved antepartum complication

Code O80 may be used if the patient had a complication at some point during the pregnancy, but the complication is not present at the time of the admission for delivery.

Patient presents in labor at 39 weeks' gestation and delivers a healthy newborn; patient had abnormal glucose levels in her first trimester, which have since resolved

O80 Encounter for full-term uncomplicated delivery

Z37.0 Single live birth

Explanation: The abnormal glucose levels during the first trimester cannot be coded if they are not affecting the patient's current trimester. Without additional complications associated with the pregnancy, fetus, or mother, code O80 is appropriate.

3) Outcome of delivery for O80

Z37.0, Single live birth, is the only outcome of delivery code appropriate for use with O80.

o. The peripartum and postpartum periods

1) Peripartum and postpartum periods

The postpartum period begins immediately after delivery and continues for six weeks following delivery. The peripartum period is defined as the last month of pregnancy to five months postpartum.

2) Peripartum and postpartum complication

A postpartum complication is any complication occurring within the six-week period.

3) Pregnancy-related complications after 6-week period

Chapter 15 codes may also be used to describe pregnancy-related complications after the peripartum or postpartum period if the provider documents that a condition is pregnancy related.

Patient admitted for varicose veins. She had a baby boy three months ago; the varicose veins started to appear one month ago. The doctor attributes the patient's pregnancy as the cause of the varicose veins, which continue to be painful and bother the patient. She is seeking surgical relief.

O87.4 Varicose veins of the lower extremity in the puerperium

Explanation: Although the varicose veins occurred several months after the delivery of the newborn, the doctor attributed the varicose veins to pregnancy and therefore a code from chapter 15 is appropriate.

4) Admission for routine postpartum care following delivery outside hospital

When the mother delivers outside the hospital prior to admission and is admitted for routine postpartum care and no complications are noted, code Z39.0, Encounter for care and examination of mother immediately after delivery, should be assigned as the principal diagnosis.

5) Pregnancy associated cardiomyopathy

Pregnancy associated cardiomyopathy, code O90.3, is unique in that it may be diagnosed in the third trimester of pregnancy but may continue to progress months after delivery. For this reason, it is referred to as peripartum cardiomyopathy. Code O90.3 is only for use when the cardiomyopathy develops as a result of pregnancy in a woman who did not have pre-existing heart disease.

p. Code O94, Sequelae of complication of pregnancy, childbirth, and the puerperium**1) Code O94**

Code O94, Sequelae of complication of pregnancy, childbirth, and the puerperium, is for use in those cases when an initial complication of a pregnancy develops a sequelae requiring care or treatment at a future date.

2) After the initial postpartum period

This code may be used at any time after the initial postpartum period.

3) Sequencing of code O94

This code, like all sequela codes, is to be sequenced following the code describing the sequelae of the complication.

q. Termination of pregnancy and spontaneous abortions**1) Abortion with liveborn fetus**

When an attempted termination of pregnancy results in a liveborn fetus, assign code Z33.2, Encounter for elective termination of pregnancy and a code from category Z37, Outcome of Delivery.

2) Retained products of conception following an abortion

Subsequent encounters for retained products of conception following a spontaneous abortion or elective termination of pregnancy, without complications are assigned O03.4, Incomplete spontaneous abortion without complication, or code O07.4, Failed attempted termination of pregnancy without complication. This advice is appropriate even when the patient was discharged previously with a discharge diagnosis of complete abortion. If the patient has a specific complication associated with the spontaneous abortion or elective termination of pregnancy in addition to retained products of conception, assign the appropriate complication code (e.g., O03.-, O04.-, O07.-) instead of code O03.4 or O07.4.

Patient was seen two days ago for complete spontaneous abortion but returns today for urinary tract infection (UTI) with ultrasound showing retained products of conception

O03.38 Urinary tract infection following incomplete spontaneous abortion

Explanation: Although the diagnosis from the patient's previous stay indicated that the patient had a complete abortion, it is now determined that there were actually retained products of conception (POC). An abortion with retained POC is considered incomplete and in this case resulted in the patient developing a UTI.

3) Complications leading to abortion

Codes from Chapter 15 may be used as additional codes to identify any documented complications of the pregnancy in conjunction with codes in categories in O04, O07 and O08.

r. Abuse in a pregnant patient

For suspected or confirmed cases of abuse of a pregnant patient, a code(s) from subcategories O9A.3, Physical abuse complicating pregnancy, childbirth, and the puerperium, O9A.4, Sexual abuse complicating pregnancy, childbirth, and the puerperium, and O9A.5, Psychological abuse complicating pregnancy, childbirth, and the puerperium, should be sequenced first, followed by the appropriate codes (if applicable) to identify any associated current injury due to physical abuse, sexual abuse, and the perpetrator of abuse.

See Section I.C.19. Adult and child abuse, neglect and other maltreatment.

s. COVID-19 infection in pregnancy, childbirth, and the puerperium

During pregnancy, childbirth or the puerperium, when COVID-19 is the reason for admission/encounter, code O98.5-, Other viral diseases complicating pregnancy, childbirth and the puerperium, should be sequenced as the principal/first-listed diagnosis, and code U07.1, COVID-19, and the appropriate codes for associated manifestation(s) should be assigned as additional diagnoses. Codes from Chapter 15 always take sequencing priority.

If the reason for admission/encounter is unrelated to COVID-19 but the patient tests positive for COVID-19 during the admission/encounter, the appropriate code for the reason for admission/encounter should be sequenced as the principal/first-listed diagnosis, and codes O98.5- and U07.1, as well as the appropriate codes for associated COVID-19 manifestations, should be assigned as additional diagnoses.

Patient admitted in labor at 39 weeks' gestation and delivered a healthy newborn. Prenatal care consisted of some hyperemesis early in the pregnancy that has since resolved. No complications encountered during or following delivery. As per hospital protocol, during the pandemic, all patients are to be screened for COVID-19, and the patient tested positive. She remains asymptomatic, will be sent home to quarantine for 14 days.

O98.52 Other viral diseases complicating childbirth**U07.1 COVID-19****Z3A.39 39 weeks gestation of pregnancy****Z37.0 Single live birth**

Explanation: No code is assigned for the hyperemesis as it resolved prior to this admission. Per guideline I.C.1.g.1.f, a screening code is generally not appropriate during the pandemic phase of COVID-19. Most hospitals screen their patients upon admission to the hospital to ensure proper protocols are in place for monitoring and treating those patients who do test positive for the disease. A positive test result alone is confirmation of the disease, according to guideline I.C.1.g.1.a, and code U07.1 should be assigned. A claim for any patient admitted during pregnancy, childbirth, or the puerperium and who tests positive or is treated for COVID-19 should have a code from subcategory O98.5- sequenced first, followed by code U07.1. As the patient was asymptomatic, no additional codes are assigned to represent any manifestation of the COVID-19 infection.

Chapter 15. Pregnancy, Childbirth and the Puerperium (O00-O9A)

NOTE CODES FROM THIS CHAPTER ARE FOR USE ONLY ON MATERNAL RECORDS, NEVER ON NEWBORN RECORDS

Codes from this chapter are for use for conditions related to or aggravated by the pregnancy, childbirth, or by the puerperium (maternal causes or obstetric causes)

NOTE Trimesters are counted from the first day of the last menstrual period. They are defined as follows:

1st trimester- less than 14 weeks 0 days

2nd trimester- 14 weeks 0 days to less than 28 weeks 0 days

3rd trimester- 28 weeks 0 days until delivery

Use additional code from category Z3A, Weeks of gestation, to identify the specific week of the pregnancy, if known.

EXCLUDES 1 supervision of normal pregnancy (Z34.-)
 mental and behavioral disorders associated with the puerperium (F53.-)
 obstetrical tetanus (A34)
 postpartum necrosis of pituitary gland (E23.0)
 puerperal osteomalacia (M83.0)

This chapter contains the following blocks:

O00-O08 Pregnancy with abortive outcome
 O09 Supervision of high risk pregnancy
 O10-O16 Edema, proteinuria and hypertensive disorders in pregnancy, childbirth and the puerperium
 O20-O29 Other maternal disorders predominantly related to pregnancy
 O30-O48 Maternal care related to the fetus and amniotic cavity and possible delivery problems
 O60-O77 Complications of labor and delivery
 O80-O82 Encounter for delivery
 O85-O92 Complications predominantly related to the puerperium
 O94-O9A Other obstetric conditions, not elsewhere classified

Pregnancy with abortive outcome (O00-O08)
